## TR KALİTE POLİTİKAMIZ

Polat Group Redüktör San. ve Tic. A.Ş., en iyiyi yakalamak için; İş Sağlığı ve Güvenliği, Çevre Güvenliği ve Kalite Yönetim Sistemi uygulamalarını, Üretim ve Hizmet sürecinin vazgeçilmez bir unsuru olarak değerlendirmekte ve uygulamaktadır.

Bu doğrultuda;

- Yayınlanmış ulusal/uluslararası yasal şartlar ve diğer şartlara uymak ve güncelliğini takip etmeyi;
- Atıkları kaynağında azaltmak ve teknolojik imkanlar ile çevre etkilerini kontrol altında tutmayı;
- Bünyemizde uygulanan yönetim sistemlerinin performansının değerlendirmek ve sürekli iyileştirmeyi;
- Eğitimlerle çalışanlarımızı çevre, iş sağlığı ve güvenliği ve Kalite yönetim sistemleri konusunda bilinçlendirmeyi;
- Çalışan sağlığının ve çevrenin korunması için çalışmalarını güncel tutmayı;
- Sektöründeki teknolojik gelişmeleri takip etmeyi, pazar payındaki istikrarını sürdürmek için müşterilerinin istek ve beklentilerine eksiksiz ve zamanında cevap vererek sürekli artan müşteri memnuniyetini sağlamayı, eğitimli çalışanlarının performansını, huzurlu bir çalışma ortamı sağlayarak artırmayı;

Şirket politikası olarak benimsemiştir.

## VİZYONUMUZ

Müşteri ve çalışan memnuniyetini en üst düzeyde tutan, gelişmeleri izleyen değil yaratan bir dünya şirketi olmaktır.

## MİSYONUMUZ

Müşterilerimizin ihtiyaçlarını karşılayacak çözümleri bilgi teknolojilerini kullanarak en verimli ve kaliteli şekilde sunmaktır.

Polat Group Redüktör olarak birçok farklı ürün yelpazesi ile, müşteri ihtiyacını maksimum seviyede karşılamak için eş zamanlı mühendislik yöntemlerini kullanarak çalışmalarını sürdürmektedir. Tasarım faaliyetleri, ürün geliştirme programları ve bilgisayar destekli çalışmalarımız sürekli gelişen bir grafik çizmektedir. Rekabetçi ve güçlü kalite politikamız müşteri yelpazemizi genişletmektedir.

## EN OUR QUALITY POLICY

Polat Group Redüktör San. ve Tic. A.Ş., considers and applies Occupational Health and Safety, Environmental Safety and Quality Management System as the inseparable part of Production and Service process.

In line with this, our company adopts:

- Complying with published national/international legal provisions and other conditions and following up-to-datedness thereof;
- Reducing wastes in resources and keeping environmental impacts under control with technological opportunities;
- Assessing and constantly improving performance of management systems applied within our company;
- Raising awareness of our employees about occupational health and safety and quality management systems through trainings;
- Keeping our activities up-to-dated to protect personnel health and environmental protection;
- Following technological developments in the sector, ensuring ever-increasing customer satisfaction by responding to requests and expectations of customers completely and duly to sustain stability in the market share and increasing performance of trained employees by providing a peaceful working environment;

as the company policy.

## OUR VISION

Our vision is to become a world company which meets and surpasses the customer satisfaction and which not only follows the development but also creates the development itself.

## OUR MISSION

Our mission is to provide the solutions to our customers in the most efficient and qualified way by making use of the information technologies.

Our reducer group carries out its work using simultaneous engineering methods in order to meet the demands of our customers by presenting several different product ranges. Design and planning activities, product development programmes and computer supporting work show a continuously growing chart. Our competitive and strong quality policy is to develop our customer spectrum.

## DE UNSERE QUALITÄTSPOLITIK

Polat Group Redüktör San. ve Tic. A.Ş., um an das Beste zu gelangen; es bewertet und implementiert die Praktiken des Arbeitsschutz-, Umweltsicherheits- und Qualitätsmanagementsystems als unverzichtbares Element des Produktions- und Serviceprozesses.

In diese Richtung;

- Einhaltung und Befolgung der aktualisierten nationalen / internationalen gesetzlichen und sonstigen Anforderungen;
- Abfall an seiner Quelle zu reduzieren und technologische Möglichkeiten und Umweltauswirkungen unter Kontrolle zu halten;
- Bewertung und kontinuierliche Verbesserung der Leistung der in unserer Struktur implementierten Managementsysteme;
- Sensibilisierung unserer Mitarbeiter für Umwelt-, Arbeitsschutz- und Qualitätsmanagementsysteme durch Schulungen;
- Um unsere Arbeit zum Schutz der Gesundheit und der Umwelt der Mitarbeiter auf dem neuesten Stand zu halten;
- Verfolgung der technologischen Entwicklungen in der Branche, Gewährleistung der stetig steigenden Kundenzufriedenheit durch vollständige und pünktliche Reaktion auf die Anforderungen und Erwartungen ihrer Kunden, um ihre Marktanteilstabilität zu erhalten, Steigerung der Leistung ihrer geschulten Mitarbeiter durch Schaffung eines friedlichen Arbeitsumfelds;

hat sie als Unternehmenspolitik übernommen.

## UNSERE VISION

Unsere Vision ist ein Weltunternehmen zu erschaffen, das die Kunden - und Mitarbeiterzufriedenheit ständig im höchsten Zustand haltet und die Entwicklungen nicht nur verfolgt, sondern auch gestaltet.

## UNSER ZIEL

Unser Ziel ist unseren Kunden die Produkte, Qualitäts- und Dienstleistungen sowie Lösungen, die die Kundenerwartungen übertreffen und im besten und leistungsfähigsten Zustand mit Hilfe der neuesten Informationstechnologien zu bieten.

Polat Group Redüktör GmbH führt sämtliche Tätigkeiten des Ingenieurwesens gleichzeitig weiter, um die Kundenerwartungen an alle unsere Produkte aus verschiedenen Produktpaletten im höchsten Zustand zu übertreffen. Unsere Entwurfstätigkeiten und Produktentwicklungsprogramme und EDV unterstützten Arbeitsprozesse zeigen eine steigende Grafik. Unsere wettbewerbsfähige und kräftige Qualitätspolitik vergrößert unseren Kundenumfang weiter.

## Redüktör Seçimi

Bir redüktör seçilirken, PGR üç fazlı asenkron AC motorları ve tek fazlı AC motorları kullanıldığını öngörür. Bu aynı zamanda teknik olarak karşılaştırılabilen tüm motorlar için de geçerlidir. Herhangi başka bir motor kullanımı halinde PGR'ye danışınız. Dişli ünitesinin seçimi yapılırken aşağıda belirtilen ana esaslara bağlı kalınmaz ise ünite de istenmeyen aşırı yüklenme durumları açığa çıkabilir. Bu durumda tarafımızdan verilen tüm garantiler kapsam dışına çıkar. Kullanılacak redüktörden yüksek verim alabilmenin ilk adımı size uygun olan doğru ürünü seçebilmektir.

Redüktör seçimi yapılırken aşağıdaki kritik hususlara dikkat edilmelidir. Bunlar Mekanik kontrol, termal limit kontrolü, redüktör mili üzerine gelebilecek radyal ve eksenel yük kontrolleri ve servis faktörü kontrolüdür.

Hangi redüktörün sizin makinanız için uygun olduğuna, makinanızın çalışma şartlarına göre gerekli giriş gücü, istenilen tahvil oranı ve servis faktörü değerlerinin belirlenmesinden sonra karar verilmelidir. Optimum çalışma şartları sağlanacak redüktördeki aşırı yüklenmeden kaynaklı tüm problemlerin oluşması engellenmelidir.

Seçim yapılırken dikkat edilmesi gereken önemli unsurlardan biri de kullanılan harici yedek parçalar, giriş ve çıkış aksesuarlarıdır. PGR'nin önerdiği ürünler haricinde ekipman kullanımı veya redüktörün zarar görebileceği şüpheli durumlarda PGR satış departmanı ile irtibata geçilmeli, teknik veriler ve tasarım tekrar kontrol edilmelidir.

Firmadan habersiz yapılan uygulama ve yanlış seçimler sonucunda redüktör ile ilgili yaşanan problemlerde tarafımızdan verilen tüm garantiler kapsam dışına çıkar.

## Redüktör Seçim Kriterleri

### 1.Mekanik kontrol:

İlk olarak makinanızın çalışma şartlarının bilinmesi gerekir. Bunlar günlük çalışma süresi, saatteki start-stop sayısı ve makineden gelecek yükün hangi yük sınıfı içerisinde olduğunun belirlenmesidir.

Yük sınıfı ise motor miline indirgenmiş toplam dış atalet momentinin, motor atalet momentine oranından elde edilen sayıya (maf) göre belirlenir.  $maf \leq 0.25$  ise düzgün çalışma yük sınıfı (U),  $0.25 < maf \leq 3$  ise orta darbeli yük sınıfı (M) ve  $3 < maf \leq 10$  ise çalışmanın ağır darbeli yük sınıfında (H) olduğu anlamına gelir.

Günlük çalışma süresi ve saatteki start-stop sayısı makinanın çalışma şartlarından kolayca belirlenir. Sonrasında sayfa 5'deki diyagram 1 kullanılarak mekanik yönden gerekli servis faktörü değeri bulunur.

### 2.Termal Limit Kontrolü

Redüktörde bazı çalışma koşullarında aşırı ısınma gözlemlenir. Termal sınırlar kataloglardaki termal yönden müsaade edilen motor güç değerlerine bakılarak kontrol edilmelidir. Termal güç değerlerinin yeterli olmadığı durumlarda çalışma koşullarına göre verilecek ilave soğutucularla (fan, serpantin, eşanjör, radyatör vb.) termal güç değerlerini arttırmak mümkündür.

Redüktörün aşırı ısınmaması için güç transferi sürelerinin belirlenen çalışma zamanının aşılması gereklidir. Termal olarak transfer edilebilen güç süresi (3saat) sadece PA/PF 62, PD/PM 62, PKD 6390 ve daha büyük gövdeler için olası bir sınırı temsil eder.

## Gearbox Selection

When selecting gear unit , PGR assumes that three-phase AC motor or single phase AC motor are used. This is also valid for technically comperable motors. If you intend to use a motor other than PGR, please contact with PGR. If you do not obey the main instructions which are given below, you may have some problems like overloading. In these situations, our all guarantees will be invalid. If you want get high efficiency from our products, the main step is choosing right product.

At reducer choosing step, you should be careful about following points like mechanical control, thermal limit control, the radial and axial loads control which is on reducer shaft and service factor.

After deciding input power, desired ratio number and service factor, you should decide which reducer is suitable for your machines. If you want to ensure optimal working conditions, all problems caused by overloading should be prevented.

At choosing step, external spare parts, input and output accessories has also importance. When using equipments which are not advised by PGR and under suspecious situation which can harm reducer, please consult to PGR sales office department which is responsible for giving technical information to you.

Applications which are done without information of us and wrong selections are out of guarantee.

## The conditions of selecting gear unit are as the following:

### 1.Mechanical control:

Firstly, you should know working conditions of your machine. These are daily working time,revolution per hours and loads which are applied from driven machine to gear unit should be known in which load classification.

Load Classification can be determined from ratio between external moment of inertia and motor moment of inertia(maf) If  $maf \leq 0.25$  it is Uniform application(U)  $0.25 < maf \leq 3$  it is Moderate impact application(M)  $3 < maf \leq 10$  it is Heavy impact application(H)

You can easily decide to daily working time, revolution per hours from working conditions of machine. After that, you can choose service factor from diagram at page 5 on mechanical way.

### 2.Thermal Limit Control

Overheating may happen in gearbox under some operating conditions. Thermal limits should be checked by looking at the thermally permissible motor power values at catalogues. If thermal power values are not enough, it will be possible to increase the thermal power values with additional coolers like fan, coil, heat exchanger, radiator, etc.,and they should be given according to the operating conditions.

For the gearbox does not to be overheated, the power transfer times must not exceed the specified operating time. Thermally transferable power time (3hour) shows a possible limit only for PA/PF 62, PD/PM 62, PKD 6390 and larger cases.

## Getriebeauswahl

Bei der Getriebeauswahl prognostiziert PGR den Einsatz von Drehstrom-Asynchronmotoren und Einphasen-Wechselstrommotoren. Dies gilt auch für alle technisch vergleichbaren Motoren. Wenden Sie sich an PGR, wenn ein anderer Motor verwendet wird. Unerwünschte Überlastsituationen im Aggregat können auftreten, wenn bei der Auswahl des Getriebes folgende Hauptprinzipien nicht beachtet werden. In diesem Fall erlöschen alle von uns gegebenen Garantien. Der erste Schritt, um eine hohe Effizienz des zu verwendenden Reduzierstücks zu erzielen, besteht darin, das richtige Produkt auszuwählen, das zu Ihnen passt.

Bei der Auswahl des Reduzierstücks sollten die folgenden kritischen Punkte berücksichtigt werden. Dies sind mechanische Kontrolle, thermische Grenzkontrolle, quer und axiale Lastkontrolle an der Getriebewelle und Betriebsfaktorkontrolle.

Welches Getriebe für Ihre Maschine geeignet ist, sollte nach Ermittlung der erforderlichen Eingangsleistung, des gewünschten Übersetzungsverhältnisses und der Betriebsfaktorwerte entsprechend den Arbeitsbedingungen Ihrer Maschine entschieden werden. Es sollen optimale Arbeitsbedingungen geschaffen werden und alle Probleme durch Überlastung im Getriebe sollen vermieden werden.

Einer der wichtigsten Faktoren, die bei der Auswahl zu berücksichtigen sind, sind die externen Ersatzteile sowie das Eingangs- und Ausgangszubehör. Wenn andere Geräte als die von PGR empfohlenen Produkte verwendet werden oder der Verdacht auf eine Beschädigung des Getriebes besteht, sollte der PGR-Vertrieb kontaktiert und die technischen Daten und das Design erneut überprüft werden.

Alle von uns gegebenen Garantien erlöschen im Falle von Problemen im Zusammenhang mit dem Reduzierstück aufgrund der Anwendung und falscher Entscheidungen, die ohne Wissen des Unternehmens getroffen wurden.

## Auswahlkriterien für Getriebe

### 1.Mechanische Kontrolle:

Zunächst sollten die Arbeitsbedingungen Ihrer Maschine bekannt sein. Dies sind die tägliche Arbeitszeit, die Anzahl der Starts-Stopps pro Stunde und die Ermittlung der Belastungsklasse der Maschine.

Der Stoßgrad ergibt sich aus der Gleichmäßigkeit des Betriebes und aus dem Massenbeschleunigungsfaktor (maf). Bei  $maf \leq 0,25$  gleichmäßiger Betrieb (U), bei  $0,25 < maf \leq 3$  ungleichmäßiger Betrieb (M) und bei  $3 < maf \leq 10$  stark ungleichmäßiger Betrieb (H).

Die tägliche Arbeitszeit und die Anzahl der Starts-Stopps pro Stunde lassen sich leicht aus den Arbeitsbedingungen der Maschine ermitteln. Anschließend wird anhand von Diagramm 1 auf Seite 5 der mechanisch erforderliche Betriebsfaktor-Wert ermittelt.

### 2. Thermische Limitkontrolle

Unter bestimmten Betriebsbedingungen kann eine Überhitzung des Getriebes beobachtet werden. Thermische Grenzen sollten anhand der thermisch zulässigen Motorleistungswerte in den Katalogen überprüft werden. In Fällen, in denen die thermischen Leistungswerte nicht ausreichen, ist es möglich, die thermischen Leistungswerte mit zusätzlichen Kühlern (Lüfter, Serpentin-Kühler, Wärmetauscher, Öl/Wasserkühler usw.) entsprechend den Betriebsbedingungen zu erhöhen.

Damit das Getriebe nicht überhitzt, dürfen die Kraftübertragungszeiten die angegebene Betriebszeit nicht überschreiten.

Die thermisch übertragbare Leistungszeit beträgt (3h) und stellt nur bei PA/PF 62, PD/PM 62, PKD 6390 und größeren Körpern eine mögliche Grenze dar.

TR

## TEKNİK BİLGİLER

Aşağıdaki maddelerden iki veya daha fazlasının geçerli olması durumunda redüktörün belirli operasyonel durumu kontrol edilmelidir. PGR ile iletişime geçmenizi öneririz.

- Ortam sıcaklığı 40 °C fazla ise
- Dönme hızı n1 1500 min-1 üzerinde ise
- Motor gücü P1 100 kW ve üzeri ise
- W, IEC ve PAM adaptör bağlı redüktör söz konusu ise
- Dik olarak montaj söz konusu ise (M2 – M4)
- Tahvil oranı itop < 20 (Konik dişliler için itop < 40)

Redüktörün korunup sağlıklı çalışması için, ısı radyasyonu yoğun alanda çalışma, dar alanda çalışma, kapalı alanda çalışma gibi özel çevresel montaj koşullarının olduğu durumlarda PGR'ye danışınız.

### 3. Giriş gücü ve servis faktörü

Her bir uygulama için gerekli olan giriş gücü, hesaplama ile belirlenir. Motor anma gücü (P1), bu giriş gücünden sonra seçilir. Motor anma gücü istenilen güç değerinden biraz daha yüksektir. Bunun sebebi çalışma koşullarının standart dışı özel olabilesidir.

Montajı yapılacak 3 fazlı bir AC motorunun anma gücünü seçerken kısa aralıklı seyrek tork tesirini hesaplamaya gerek yoktur. İlave faktörler belirli bir frekans invertöründe çalışan 3 fazlı bir AC motor için anma gücünün seçimini etkiler. Dişli ünitesinin seçimini AC motorun aksine kısa aralıklı seyrek tork tesirleri etkiler. Dişli ünitesinin yük sınıfı belirlenirken bu kısa aralıklı seyrek tork tesirleri göz önünde bulundurulmalıdır. Redüktör servis faktörü fB bunu ve redüktör üzerindeki diğer etkileri yeterli doğrulukta hesaba katar.

5. Sayfadaki diyagram 1 günlük çalışma süresi, yük sınıflandırması, saatteki start-stop sayısı ile servis faktörü arasındaki ilişkiyi göstermektedir.

EN

## TECHNICAL INFORMATION

If the two or more of below items are valid, the specific operational condition of the reducer should be checked. Please kindly contact with PGR.

- If the ambient temperature is above 40°
- If the rotation speed n1 is over 1500 min-1
- If the motor power P1 is 100 kW and above
- If there is W, IEC ve PAM adaptor connected gearbox
- In case of vertical mounting preferred (M2 – M4)
- The ratio itop < 20 (For bevel gears itop < 40)

Please kindly consult to PGR, in case of work in heat radiation-intensive area, work in narrow space, work in confined space to be prevented and worked healthier gearboxes.

### 3.Input power and service factor

For every application, the requiring input power should be calculated. Motor rated power (P1) should be selected after choosing input power. The motor rated power is slightly higher than the desired power value. The reason for this situation is working conditions are non-standart, they are special

It is not necessary to calculate the short-range rare torque effect when choosing the rated power of a 3-phase AC motor to be mounted. Additional factors affect the choice of rated power for a 3-phase AC motor operating in a particular frequency inverter. Unlike the AC motor, short-range infrequent torque effects affect the choice of gear unit. These short-range infrequent torque effects should be taken into account when determining the load class of the gear unit. The gear unit service factor fB takes this and other effects on the gear unit into account with sufficient accuracy.

Diagram 1 which is shown on page 5, presents relation between types of load, revolution per hour and minimum service factor depend on operation hours or day.

DE

## TECHNISCHE INFORMATION

Wenn zwei oder mehr der folgenden Punkte zutreffen, sollte der spezifische Betriebszustand des Getriebes überprüft werden. Wir empfehlen Ihnen, sich an PGR zu wenden.

- Wenn die Umgebungstemperatur mehr als 40 °C beträgt
- Wenn die Drehzahl n1 über 1500 min-1 . liegt
- Wenn die Motorleistung P1 100 kW und mehr beträgt
- Bei W-, IEC- und PAM-Adapter angeschlossenem Getriebe
- Bei vertikaler Montage (M2 – M4)
- Bindungsverhältnis itop < 20 (itop < 40 für Kegelräder)

Wenden Sie sich an PGR in Fällen, in denen besondere Umgebungsbedingungen für die Montage herrschen, wie z. B. Arbeiten in einem wärmestrahlungsintensiven Bereich, Arbeiten in einem engen Bereich, Arbeiten in einem geschlossenen Bereich, zum Schutz und zum gesunden Betrieb des Getriebes.

### 3. Eingangsleistung und Servicefaktor

Die für jede Anwendung benötigte Eingangsleistung wird rechnerisch ermittelt. Die Motornennleistung (P1) wird nach dieser Eingangsleistung gewählt.

Die Motornennleistung könnte etwas höher sein als der gewünschte Leistungswert. Dies liegt daran, dass die Arbeitsbedingungen vom Standard abweichen können.

Bei der Auswahl der Nennleistung eines zu installierenden 3-Phasen-Wechselstrommotors muss der kurzzeitige seltene Drehmomenteffekt nicht berechnet werden. Zusätzliche Faktoren beeinflussen die Wahl der Nennleistung für einen 3-Phasen-Wechselstrommotor, der in einem bestimmten Frequenzrichter betrieben wird. Im Gegensatz zum Wechselstrommotor beeinflussen seltene Drehmomenteffekte im Nahbereich die Wahl des Getriebes. Diese kurzreichweitigen seltenen Drehmomenteffekte sollten bei der Bestimmung der Belastungsklasse des Getriebes berücksichtigt werden. Der Getriebebetriebsfaktor fB berücksichtigt diese und weitere Auswirkungen auf das Getriebe mit ausreichender Genauigkeit

Das Diagramm auf Seite 5 zeigt den Zusammenhang zwischen 1-Tages-Betriebszeit, Lastklassifizierung, Anzahl Starts-Stops pro Stunde und Betriebsfaktor.

SERVİS FAKTÖRÜ

EN

SERVICE FACTOR

DE

SERVICEFAKTOR

Diyagram 1 günlük çalışma zamanına (saat), saatteki start sayısına ve uygulanan yük tipi sınıflandırmasına "U", "M", "H" göre gerekli servis faktörünü gösterir. Çalışma düzgünlüğüne ve kütle hız faktörüne (maf) bağlı olarak, üç yük sınıflandırması belirlenmiştir. Hareket ettirilen mekanizmaya gelen dış etkiler çalışma düzgünlüğü sınıflamasını tanımlarken kütleli ivme faktörüne bağlı olarak 3 farklı yük sınıflandırması belirlenir. Diagram 1 kullanılarak belirlenen servis faktörü, motorlu seçim tablolarında verilen servis faktörüne eşit ya da küçük olmalıdır.

**Not :** Elde edilen servis faktörü  $f_B$  kullanılan sürücü (tahrik) tipine göre "k" katsayısı ile çarpılır.

k = 1 ; elektrik motoru veya hidromotor,  
k = 1.25 ; çok silindirli içten yanmalı motor,  
k = 1.50 ; tek silindirli içten yanmalı motor

The diagram 1 shows the required service factor according to daily working time (hours), revolution per hours, and the applied load type "U", "M", "H". Three load classifications are determined, and they are depending on the working regularity and the mass acceleration factor (maf). While the external effects on the driven mechanism define the working smoothness classification, 3 different load classifications are determined depending on the mass acceleration factor. Service factor which is determined by using Diagram 1 must be less than or equal to the service factor given in the motor selection tables.

**Note :** Service factor  $f_B$  which is obtained, should be multiplied with factor "k" which depends on drive type.

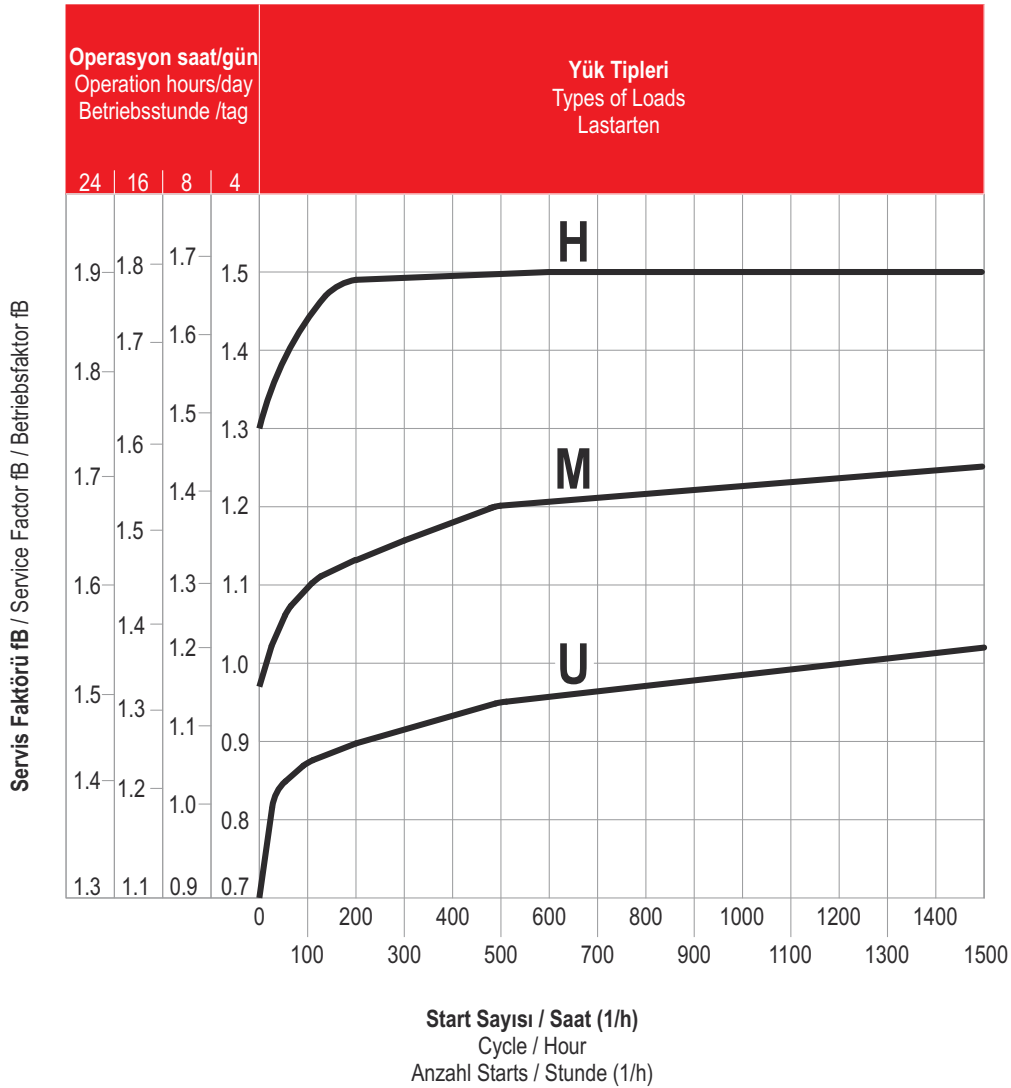

k = 1 ; hydraulic motor and electrical motor  
k = 1.25 ; multi-cylinder engine  
k = 1.50 ; single-cylinder engine

Das Diagramm zeigt den erforderlichen Betriebsfaktor entsprechend der 1-Tages-Betriebszeit (Stunden), der Anzahl der Starts pro Stunde und der angewendeten Lastartenklassifizierung "U", "M", "H". Auf Basis der Laufruhe und des Massengeschwindigkeitsfaktors (maf) wurden drei Belastungsklassen ermittelt. Während die äußeren Einwirkungen auf den angetriebenen Mechanismus die Laufruheklasse bestimmen, werden in Abhängigkeit vom Massenbeschleunigungsfaktor 3 verschiedene Lastklassen bestimmt. Der nach Diagramm 1 ermittelte Betriebsfaktor muss kleiner oder gleich dem in den Motorauswahltabellen angegebenen Betriebsfaktor sein.

**Hinweis:** Der resultierende Betriebsfaktor  $f_B$  wird mit dem Koeffizienten "k" entsprechend der verwendeten Antriebsart (Antrieb) multipliziert.

k = 1 ; Elektromotor oder Hydromotor  
k = 1,25 ; Mehrzylinder-Verbrennungsmotor  
k = 1,50 ; Einzylinder-Verbrennungsmotor

### Diyagram / Diagram / Diagramm - 1

**Yük Sınıfının Belirlenmesi:****U ) Düzgün çalışma**

Küçük karıştırıcılar, asansörler, konveyörler, montaj bantları, doldurma makinaları, bantlı konveyörler, temizleme makinaları, fanlar, test makinaları, santrifüj pompalar (ince sıvı pompalar).

**M ) Yumuşak şoklar, düzgün olmayan çalışma**

Ağır yük konveyör bantları, değirmenler, ahır gübre makinaları, vinç hareket mekanizmaları, bükme makinaları, çimento karıştırıcılar, ahşap işleme makinaları için tahrik mekanizmaları, vinçler, kayar kapılar, balans makinaları, paketleme makinaları, dişli pompalar, santrifüj pompalar (yarı sıvı pompalar), vana döndürme dişlileri, dokuma tezgahları, hallaç makinaları, harman makinaları, taneleme (debegat) tekneleri, kolenderler, agidatörler, kurutma merdaneleri.

**H ) Ağır şoklar, aşırı düzgün olmayan çalışma**

Taş kırıcılar, eksantrik presler, doğrayıcılar, presler, taşlama milleri, çekiçli kırıcılar, kağıt öğütücüler, ağır yük karıştırıcılar, delme makinaları, katlama makinaları, dönen tezgahlar, yatay karıştırıcılar, kesiciler, vibratörler, santrifüj makinaları, döner tablalar, ağır yük vinç ve asansörler, plaka-silindir-soğuk haddeleme makinaları, hız ayarlı sabit silindirler, kağıt hamur makinaları, kurutma silindirleri, perdelama silindirleri.

Yük sınıfı (çalışma düzgünlüğü) aşağıdaki tabloya göre kütle hız faktörü (maf) den belirlenir. Eğer çalışma düzgünlüğü ile hesap ettiğimiz maf birbirleriyle uyumlu değilse (Örneğin: yumuşak geçişli düzgün olmayan çalışma koşulu ve maf:0,2 için gerekli yük sınıfımız "M" olmalıdır ya da düzgün çalışma koşulu ve maf: 0,28 için gerekli yük sınıfımız yine M olmalıdır.) daha ağır çalışma sınıfı gurubuna giren geçerlidir.

**Determination of Load Class:****U ) Regular operation**

Small agitator, elevators, conveyors, mounting belt, filling machines, belt conveyors, cleaning machines, fans, testing machines, centrifugal pumps (fine liquid pumps).

**M ) Moderate shocks, non-uniform application**

Heavy conveyor belts, mills, barn manure machine, crane motion mechanisms, bending machines, cement mixer, driving gear mechanisms for wood processing machines, cranes, sliding door, balancing machines, packaging machines, gear pumps, centrifugal pumps, valve turning gears, weaving looms, carding-machines, treshing machines, granulation vats, corianders, agitators, drying rollers.

**H ) Heavy shocks, non-uniform application**

Stone crushers, eccentric press machines, choppers, press machines, grindingmills, hammer mills, shredders, heavy mixers, boring machines, folding machines, turning looms, horizontal mixers, cutters, vibrators, centrifugal machines, heavy cranes and elevators, plate-cylinder-cold extrusion machines, fixed cylinder with regulated velocity, sluch machines, drying cylinders, polishing cylinders,

The load classification is determined from the mass velocity factor (maf) according to the below table. If the working regularity and the mass acceleration factor we calculated are not compatible with each other (For example: our required load class should be "M" for moderate shocks, non-uniform application and maf:0,2, or our required load class for regular application and maf: 0,28 is still M. It should be valid), the heavier running classification is valid.

**Bestimmung der Belastungsklasse:****U ) gleichmäßiger Betrieb**

Kleinmischer, Elevatoren, Förderer, Montagebänder, Abfüllmaschinen, Bandförderer, Reinigungsmaschinen, Ventilatoren, Prüfmaschinen, Kreiselpumpen (Feinflüssigkeitspumpen).

**M ) Weiche Stöße, ungleichmäßiger Betrieb**

Schwerlastförderbänder, Mühlen, Stallmistmaschinen, Kranantriebe, Biegemaschinen, Betonmischer, Antriebe für Holzbearbeitungsmaschinen, Kräne, Schiebetüren, Auswuchtmaschinen, Verpackungsmaschinen, Zahnradschneidemaschinen, Kreiselpumpen (Halbflüssigkeitspumpen), Ventilatorvorrichtungen, Webstühle, Putzereimaschinen, Dreschmaschinen, Granulier-(Debegat-) Behälter, Siebe, Rührwerke, Trockenwalzen.

**H ) Starke Stöße, stark ungleichmäßiger Betrieb**

Steinbrecher, Exzenterpressen, Häcksler, Pressen, Mahlspeindeln, Hammerbrecher, Aktenvernichter, Hochleistungsmischer, Stanzmaschinen, Abkantmaschinen, Rundtische, Horizontalmischer, Schneidgeräte, Vibratoren, Zentrifugen, Rundtische, Schwerlastkräne und Aufzüge, Plattenzylinder - Kaltwalzmaschinen, geschwindigkeitsregulierbare Festwalzen, Auflösemaschinen, Trockenwalzen, Kalandarwalzen.

Klassifizierung der Gleichmäßigkeit des Betriebes: Der Stoßgrad ergibt sich aus der Gleichmäßigkeit des Betriebes und aus dem Massenbeschleunigungsfaktor 'maf' gemäß der folgenden Tabelle. Hierbei gilt jeweils der größere Stoßgrad aus Betrieb und Massenbeschleunigungsfaktor. (Beispiel: ungleichmäßiger Betrieb und maf = 0,2 ergibt Stoßgrad "M".)

| Yük Sınıfı<br>Load Classification<br>Stoßgrad | Çalışma<br>Operation<br>Betrieb                                                                | Kütle hız faktörü<br>Mass Acceleration Factor<br>Massenbeschleunigungs-faktor |
|-----------------------------------------------|------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| U                                             | Düzgün çalışma / Uniform application / gleichmäßiger Betrieb                                   | maf ≤ 0,25                                                                    |
| M                                             | Düzgün olmayan çalışma / Non-uniform application / ungleichmäßiger Betrieb                     | 0,25 < maf ≤ 3                                                                |
| H                                             | Aşırı düzgün olmayan çalışma / Extreme non-uniform application / stark ungleichmäßiger Betrieb | 3 < maf ≤ 10                                                                  |

$$m_{af} = \frac{J_{ex.red}}{J_{mot}} = \frac{J_{ex}}{J_{mot}} \times \left( \frac{1}{i_{ges}} \right)^2$$

$i_{ges}$  = Tahvil oranı

$J_{ex.red}$  = Tahrik motoru üzerindeki azaltılmış dış kütle atalet momentleri toplamı

$J_{ex}$  = Dış kütle atalet momentleri toplamı

$J_{mot}$  = Motorun kütle atalet momenti toplamı

$i_{ges}$  = Total gear unit ratio

$J_{ex.red}$  = All external mass moment of inertia on the drive motor, reduced

$J_{ex}$  = All external mass moment of inertia

$J_{mot}$  = Mass moment of inertia of the motors

$i_{ges}$  = Getriebeübersetzung

$J_{ex.red}$  = alle externen Massenträgheitsmomente auf Antriebsmotor reduziert

$J_{ex}$  = alle externen Massenträgheitsmomente

$J_{mot}$  = Massenträgheitsmoment des Motors

Kütle hız faktörü maf, çıkış tarafındaki dış kütleler ile giriş tarafındaki yüksek hızlı kütlelerin arasındaki ilişkiyi gösterir.

Kütle hız faktörünün dişli ünitesinin tork tesir seviyesine önemli ölçüde sistem başlatma, frenleme ve titreşim üzerindeki etkisi vardır.

Örneğin bir bantlı konveyör sistemini ele alalım. Burada dış kütle atalet momentini konveyör bant üzerinde taşınan malzemenin kütle hız faktörü oluşturur. Eğer maf >10 ise transfer elemanlarında büyük deplasman (yük değişimi) var ise ya da yük sınıflandırmamızda bir belirsizlik var ise PGR'ye danışınız. Bu ve benzeri hususlarla belirli şüpheleriniz var ise PGR'ye danışınız.

The mass acceleration factor (maf) shows the relationship between the outer masses on the output side and the high speed masses on the input side.

The mass acceleration factor has an important effect on the torque effect level of the gear unit through system starting, braking and vibration

Take, for example, a belt conveyor system. Here, the mass load of the material carried on the conveyor belt creates the external mass moment of inertia. If maf is >10, there is a large displacement (load change) in the transfer elements or if there is an uncertainty in our load classification, consult PGR. If you have certain doubts about these and similar issues, consult PGR.

Der Massenbeschleunigungsfaktor maf stellt das Verhältnis von externen abtriebsseitigen und schnellaufenden antriebsseitigen Massen dar. Der Massenbeschleunigungsfaktor hat wesentlichen Einfluss auf die Höhe der Drehmomentstöße im Getriebe bei Anlauf- und Bremsvorgängen und Schwingungen. Die externen Massenträgheitsmomente beinhalten auch die Last wie z.B. das Fördergut und Transportbändern. Bei maf >10 bei großem Spiel in Übertragungselementen, Schwingungen im System, bei Unklarheiten zum Stoßgrad oder in Zweifelsfällen bitten wir Sie um Rücksprache mit PGR.

TR

TEKNİK BİLGİLER

Redüktörümüzün servis faktörü  $f_B$ 'dir. Redüktörümüz için geçerli maksimum çıkış momenti  $M_{amax}$ 'dir. Motor gücümüz  $P_1$ 'dir. Redüktör çıkış devrimiz  $n_2$ 'dir. Redüktörümüzün operasyonel çıkış momenti  $M_2$ 'dir.

Sistemimiz mekanik bir sistem olduğu için sistem ünitemizde kayıplarımız mevcuttur. Giriş gücümüz %100 kayıpsız olarak çıkışa iletilmez. Bu sebeple yüzde cinsinden verimliliği göz önünde bulundurmakta ve bunu hesaplarımızdaki formüllere eklemekteyiz. Redüktör verimliliği:  $\eta$ 'dir

$$M_2 = \frac{9550 \cdot P_1 \cdot \eta}{n_2} \quad [Nm] \quad P_1 [kW], n_2 [min^{-1}]$$

$$f_B = \frac{M_{amax}}{M_2}$$

$$P_1 = \frac{M_2 \cdot n_2}{9550} \cdot \eta \quad [kW] \quad M_2 [Nm], n_2 [min^{-1}]$$

Redüktörümüzün doğru seçimi, motorlu seçim tablolarımızda mevcut olan  $f_B$  Servis faktörü değerinin Diyagram 1'den bulduğumuz minimum servis faktörümüz  $f_{Bmin}$  değerlerinden büyük veya eşit olması durumunda mümkündür.

Selection of gear unit is correctly done if service factor which is taken from selection of gear motors table must be greater than or equal to minimum service factor  $f_{Bmin}$  which is taken from diagram-1

$$f_B \geq f_{Bmin}$$

Helisel dişli redüktörler, Paralel shaft montajlı redüktörler ve Helisel konik dişli redüktörler her bir kademede çok yüksek verime sahiptir (kademe başına yaklaşık %96 - %98 veya  $\eta = 0,96 - 0,98$ ). Bu yüzden hesaplamalarda verim  $\eta = 1,0$  alınması yeterli ve doğru sonuçlara ulaşılmasına yardımcı olur. Helisel sonsuz dişli redüktörlerin verimliliği ( $\eta$ ), her bir çıkış hızı ( $n_2$ ) için oranlar W, IEC, PAM Seçim tablolarında belirtilmiştir. W kovani montajlı (serbest hareket mili) redüktörde çıkış gücü aşağıdaki formülden hesaplanır.

Helical gear reducers has higher efficiencies than Parallel shaft mounted gear units and Helical bevel gear reducers. (approx. 96% - 98% per step or  $\eta = 0.96 - 0.98$ ). Therefore, taking efficiency  $\eta = 1.0$  in calculations helps to achieve sufficient and correct results. For efficiency ( $\eta$ ) of helical worm gear units, the ratio of each output speed ( $n_2$ ) are specified in the W, IEC, PAM selection tables. Output power is calculated from the below formula for the W (free input shaft) gear unit.

$$P_1 = \frac{M_{amax} \cdot n_2}{9550 \cdot f_{Bmin}} \cdot \eta \quad [kW] \quad M_{amax} [Nm], n_2 [min^{-1}]$$

Redüktörümüzün güvenli ve verimli bir şekilde çalışması için maksimum tahrik gücü  $P_{1max}$ 'in aşılması gerekir.

For the safe and efficient operation of our gearbox, the maximum drive power  $P_{1max}$  must not be exceeded.

$$P_1 \leq P_{1max}$$

W, IEC, PAM bağlantılı redüktörler için W, IEC, PAM seçim tablolarında her bir çıkış devri ( $n_2$ ) ve maksimum çıkış momenti ( $M_{amax}$ ) için  $P_{1max}$  değerleri tablo halinde listelenmiştir.

For gear units with W, IEC, PAM connection,  $P_{1max}$  values for each output speed ( $n_2$ ) and maximum output torque ( $M_{amax}$ ) are listed in the W, IEC, PAM selection tables.

Tahrik tarafına fren bağlanmış (Örn: frenli motorlar) redüktörlerin seçimi yapılırken fren momenti de göz önüne alınmalıdır. Dış kütle atalet momentinin yüksek olduğu ( $maf > 2$ ) uygulamalarda (örn; çember dişlilerde, döner tablalarda, karıştırıcılarda, yüzey havalandırıcılarında veya kapı sistemlerinin tahriklerinde) fren torkunun nominal anma momentinin 1,2 katından büyük olmaması, bu değer aşılması tavsiye edilir. Belirtilen değerlerden daha yüksek fren torku kullanılacak ise bu durum redüktör seçimi yapılırken göz önünde bulundurulmalıdır. Lütfen istenmeyen durumları engellemek için PGR'ye başvurunuz.

The braking torque must also be taken into account when selecting gear units with brakes on the drive side (eg brake motors). In applications in which the external mass moment of inertia is high ( $maf > 2$ ) (e.g. ring gears, rotary trays, mixers, surface aerators or drives of door systems), it is recommended that the braking torque should not be greater than 1.2 times the rated torque, so it can not exceed this value. If specified value is higher than braking torque, this should be taken into account while selecting the gear unit. Please contact PGR to prevent undesirable situations.

Der Betriebsfaktor des Getriebes ( $f_B$ ). Das gültige maximale Abtriebsdrehmoment für Getriebe ( $M_{amax}$ .) Motorleistung ( $P_1$ ) Abtriebsdrehzahl ( $n_2$ ) Abtriebsdrehmoment ( $M_2$ )

Da unser System ein mechanisches System ist, haben wir Verluste in unserer Systemeinheit. Unsere Eingangsleistung kann nicht 100% verlustfrei auf den Ausgang übertragen werden. Aus diesem Grund betrachten wir den Wirkungsgrad in Prozent und fügen ihn in unseren Berechnungen zu den Formeln hinzu. Getriebewirkungsgrad:  $\eta$

Die richtige Auswahl unseres Getriebes ist möglich, wenn der in unseren Motorauswahltabellen verfügbare Wert  $f_B$  Servicefaktor größer oder gleich unserem minimalen Servicefaktor  $f_{Bmin}$  ist, den wir aus Diagramm 1 gefunden haben.

Stirnradgetriebe, Flachgetriebe und Kegelradgetriebe haben einen sehr hohen Wirkungsgrad (ca. 96% - 98% je Getriebe-stufe oder  $\eta = 0,96 - 0,98$ ). Daher führt der vereinfachte Getriebewirkungsgrad  $\eta = 1,0$  in der Regel zu hinreichend und korrekte Ergebnissen. Bei Stirnrad-schneckengetrieben ist der Getriebewirkungsgrad ( $\eta$ ) der Schneckengetriebe in den Leistungs- und Übersetzungstabellen (W, IEC, PAM) für die jeweilige Abtriebsdrehzahl ( $n_2$ ) aufgeführt. Bei Getrieben mit freier Antriebswelle Typ W darf die installierte Antriebsleistung  $P_1$  höchstens betragen:

Hierbei darf die maximale Antriebsleistung  $P_{1max}$  nicht überschritten werden.

$P_1 \leq P_{1max}$  Die Leistungs- und Übersetzungstabellen (W, IEC, PAM) führen die jeweiligen Abtriebsdrehzahl  $n_2$  das maximale Getriebeabtriebsdrehmoment  $M_{amax}$  und die maximale Motorleistung  $P_{1max}$  auf.

Bei angebauten antriebsseitigen Bremsen, wie z.B. bei Bremsmotoren ist bei der Getriebeauswahl auch das Bremsmoment zu beachten. Bei Anwendungen mit relativ hohen externen Massenträgheitsmomenten ( $maf < 2$ ) wie z.B. häufig bei Fahrtriebwerken, Drehwerken, Drehtischen, Torantrieben, Rührwerken und Oberflächenbelüftern wird empfohlen, ein Bremsmoment zu wählen, dass nicht größer als das 1,2-fache Motornennmoment ist. Wenn höhere Bremsmomente zum Einsatz kommen sollen, ist dies bei der Getriebeauswahl zu berücksichtigen. Wir bitten dann um Ihre Anfrage.

### Radyal ve Eksenel Kuvvetler

Motorlu seçim tablolarında, çıkış mili üzerine müsaade edilebilir radyal kuvvetler (FR) ve eksenel kuvvetler (FA) ile listelenmiştir. Opsiyonel olarak birçok redüktör tipimizde güçlendirilmiş çıkış mili yataklarımız mevcuttur.

Motorlu seçim tablolarında güçlendirilmiş yataklara etki eden radyal kuvvetler (FRGR) ve eksenel kuvvetler (FAGR) olarak değerleri belirtilmiştir. Tablolarda belirtilen radyal ve eksenel kuvvetler, ayak montajlı ve flanş montajlı dişli ünitelerinin dolu mil çıkışlı montajları için geçerlidir. Verilen bu eksenel ve radyal kuvvetlerin aynı anda çıkış miline etkilememesi koşulluna dayanmaktadır.

Ayrıca motorlu seçim tablolarında yer alan radyal ve eksenel kuvvet değerleri sistemin servis faktörünün ( $f_B=1$ ) bire eşit olduğu durum için verilmiştir. Darbeli yükler, darbeli tekrarlı yükler, uzun süreli çalışmalı (>8 saat/gün) gibi uygulamalarda servis faktörünün ( $f_B>1$ ) birden büyük olduğu duruma karşılık gelen radyal ve eksenel kuvvetler dikkate alınmalıdır. İzin verilen FA ve FR kuvvetleri buna göre azaltılır.

Motorlu seçim tablolarında verilen radyal ve eksenel kuvvet değerleri milin orta noktasına etkiyen bir kuvveti ifade eder. İzin verilen radyal ve eksenel kuvvetler belirlenirken uygulanan kuvvetin uygulama istikameti ve dönüş yönünün en elverişsiz olması durumu varsayılmıştır.

Daha yüksek radyal ve eksenel kuvvetler potansiyel olarak kuvvet yönünün uygulama doğrultusuna ve dönüş yönüne göre mümkündür. Kesin bir hesaplama için bu tip uygulamalar söz konusu ise operasyonel kuvvet yönünü, dönüş yönünü ayrıca istenilen servis süresini (gerekli olan) detaylı olarak PGR'ye iletiniz.

Çıkış miline ilave transfer elemanı takılırsa, mile etkiyen radyal kuvvetin belirlenmesinde aşağıdaki tablodan bulunacak olan fz faktörü de dikkate alınmalıdır.

### fz için Tablo

| Transfer Elemanları    | Faktör fz | Açıklama        |
|------------------------|-----------|-----------------|
| Dişliler               | 1.1       | $z \leq 17$ diş |
| Zincir Dişliler        | 1.4       | $z \leq 13$ diş |
| Zincir Dişliler        | 1.2       | $z \leq 20$ diş |
| Dar V-Kayış Kasnakları | 1.7       | ön gerilim      |
| Düz kayış Kasnakları   | 2.5       | kuvveti         |
| Dişli Kayış Kasnakları | 1.5       |                 |

### Radial and Axial Forces

In the motor selection tables, allowable radial forces (FR) and axial forces (FA) for over output shaft are listed. Optionally, we have reinforced output shaft bearings in many gearbox types.

They are given as a radial forces (FRGR) and axial forces (FAGR) acting on the reinforced bearings in the motor selection tables. The radial and axial forces indicated in the tables are valid for solid shaft output mountings of foot-mounted and flange-mounted gear units. This is valid on the condition that axial and radial forces do not affect the output shaft at the same time.

In addition, the radial and axial force values in the selection tables with motor are valid for the case where the service factor of the system ( $f_B=1$ ) is equal to one. In applications such as shock loads, pulsed repetitive loads, long-term operation (>8 hours/day), you should take into account radial and axial forces corresponding to the case where the service factor ( $f_B>1$ ) is greater than one. The allowable FA and FR forces are reduced accordingly.

The radial and axial force values which is given in the motor selection tables represent a force acting on the midpoint of the shaft. While determining the allowable radial and axial forces, we assumed the application direction of the applied force and the most unfavorable rotation direction.

Higher radial and axial forces are potentially possible with respect to the direction of application and the direction of rotation of the force direction. For an exact calculation, if such applications are in calculation, please inform PGR in detail the operational force direction, the direction of rotation, and the required service time (required).

If an additional transfer element is attached to the output shaft, the fz factor from the table below should also be taken into account in determining the radial force acting on the shaft.

### fz values are shown at table

| Transfer Elements     | Factor fz | Explanation       |
|-----------------------|-----------|-------------------|
| Gears                 | 1.1       | $z \leq 17$ teeth |
| Chain Sprockets       | 1.4       | $z \leq 13$ teeth |
| Chain Sprockets       | 1.2       | $z \leq 20$ teeth |
| Narrow V-belt pulleys | 1.7       | by                |
| Flat belt pulleys     | 2.5       | pretension force  |
| Gear belt pulleys     | 1.5       |                   |

### Quer- und Axialkräfte

In den Tabellen der Leistungs- und Drehzahlübersichten sind die zulässigen Querkräfte (FR) und Axialkräfte (FA) die auf den äußeren Zapfen der Abtriebswelle wirken dürfen aufgeführt.

Für vielen Getriebetypen sind optional verstärkte Abtriebswellenlager lieferbar. Die Werte der auf die verstärkten Lager wirkenden Querkräfte (FRGR) und Axialkräfte (FAGR) sind in den Motorauswahltabellen angegeben. Die in den Tabellen angegebenen Quer- und Axialkräfte gelten für Fuß- und Flanschgetrieben mit Vollwelle. Die Kraftangaben beziehen sich auf den Fall, dass Quer- und Axialkraft nicht gleichzeitig vorliegen.

Außerdem liegt den Kraftangaben in den Tabellen der Leistungs- und Drehzahlübersicht ein Betriebsfaktor für Quer- und Axialkräfte ( $f_B=1$ ) zugrunde. Bei stoßartigen Kräften und längeren Laufzeiten > 8 Stunden/Tag ist auch für die Quer- und Axialkräfte ein entsprechender Betriebsfaktor ( $f_B>1$ ) zu berücksichtigen. Die zulässigen Querkräfte FA- und FR- werden entsprechend reduziert.

Die Querkräfteangaben beziehen sich auf Kraftangriff in der Mitte des Wellenendes. Bei der Ermittlung der zulässigen Quer- und Axialkräfte wurde die ungünstigste Kraftangriffsrichtung und Drehrichtung angenommen.

Höhere Quer- und Axialkräfte sind eventuell möglich. Wenn solche Anwendungen in Frage kommen, teilen Sie PGR bitte detailliert für eine genaue Berechnung, die Angaben der tatsächlichen Kraft- und Drehrichtung sowie der erforderlichen Lebensdauer mit.

Werden auf der Abtriebswelle Übertragungselemente aufgesetzt, so ist bei der Ermittlung der auftretenden Querkräfte ein entsprechender Faktor (fz) zu beachten.

### Querkräfte-Faktor fz

| Übertragungselemente     | Faktor fz | Hinweise          |
|--------------------------|-----------|-------------------|
| Zahnräder                | 1.1       | $z \leq 17$ Zähne |
| Kettenräder              | 1.4       | $z \leq 13$ Zähne |
| Kettenräder              | 1.2       | $z \leq 20$ Zähne |
| Schmalkeilriemenscheiben | 1.7       | durch             |
| Flachriemenscheiben      | 2.5       | Vorspannkraft     |
| Zahnriemenscheiben       | 1.5       |                   |

### Kuvvet uygulama noktası :

Kuvvet uygulama noktası aşağıdaki şekillere göre tanımlanır.

$\alpha$  : Kuvvet uygulama açısı  
force application angle  
Kraftangriffswinkel

0°

### Definition of force application point:

The point of force application is defined according to the following figure.

### Definition des Kraftangriffs

Der Kraftangriff wird gemäß dem folgenden Bild definiert

$F_{R_x}$  : "X" Uygulama noktasındaki müsaade edilen radyal kuvvet [N]

$F_A$  : Müsaade edilen eksenel kuvvet [N]

$F_{R_x}$  : Permitted overhung load at point [N]

$F_A$  : Permitted axial force [N]

$F_{R_x}$  : zulässige Querkräfte bei Abstand [N]

$F_A$  : zulässige Axialkräfte [N]

**TR** TEKNİK BİLGİLER

Mil üzerinde ortaya çıkan radyal kuvvet, aşağıdaki formül kullanılarak hesaplanmıştır.

$$F_{R\text{vorth}} = \frac{2 \cdot M_a}{d_0} \cdot f_z \leq F_R$$

- $M_2$  : Redüktör çıkış momenti [Nm]  
 $f_z$  : Tablodaki radyal kuvvet faktörü  
 $d_0$  : Etkin daire çapı [mm]  
 $F_R$  : Seçim tablolarından alınan müsaade edilebilir radyal kuvvet [kN]  
 $F_{R\text{vorth}}$  : Mil üzerindeki radyal kuvvet [kN]

Eğer kuvvet mil ortasına uygulanmazsa kuvvetin etki ettiği herhangi bir "x" noktasındaki müsaade edilen radyal kuvvet değeri aşağıdaki formül 1 ve formül 2 kullanılarak hesaplanır.

**EN** TECHNICAL INFORMATION

The radial force on the shaft was calculated using the formula below.

$$F_{R\text{vorth}} = \frac{2 \cdot M_a}{d_0} \cdot f_z \leq F_R$$

- $M_2$  : Output torque of gear unit [Nm]  
 $f_z$  : Factor which is taken from table  
 $d_0$  : Effective circular diameter [mm]  
 $F_R$  : Permitted radial force which is taken from the speed and output moment tables. [kN]  
 $F_{R\text{vorth}}$  : Radial force on the gear unit shaft [kN]

Formula 1 and formula 2 is used when force is not acting on the middle of shaft, by this way you can calculate permissible radial force value at any "x" point where the force acts

**Formül / Formula / Gleichung - I**

$$F_{RXL} = F_R \cdot \frac{z}{y + x}$$

**Formül / Formula / Gleichung - II**

$$F_{RXW} = \frac{c}{(f + x) \cdot 1000}$$

- $X$  : mil faturasından (kritik kesitinden) kuvvet uygulama noktasına olan uzaklık [mm]  
 $F_{RXW}$  : x noktasına etkiyen müsaade edilebilir radyal kuvvet (Mil dayanımına göre)  
 $F_R$  : Motorlu seçim tablolarından gelen milin ortasına etkiyen radyal kuvvet [kN]  
 $F_{RXL}$  : x noktasına etkiyen müsaade edilebilir radyal kuvvet (yataklama, rulman servis ömrüne göre)  
 $z, y, f$  : Radyal yük dönüşümü için dişli ünitesi sabitleri  
 $c$  : Radyal yük dönüşümü için dişli ünitesi sabiti

- $X$  : distance from the shaft collar to the point of force application [mm]  
 $F_{RXW}$  : permitted overhung force point X - shaft stability  
 $F_R$  : overhung force from the speed and output tables, force applied at the middle of the shaft [kN] point X - bearing service life  
 $F_{RXL}$  : permitted radial force acting on point X (according to bearing service life)  
 $z, y, f$  : Gear unit constants for radial load conversion  
 $c$  : Gear unit constant for radial load conversion

**DE** TECHNISCHE INFORMATION

Die auftretende Querkraft an der Getriebewelle wird wie folgt bestimmt:

- $M_2$  : (Nm) Abtriebsmoment des Getriebes  
 $f_z$  : Querkraft-Faktor aus Tabelle  
 $d_0$  : (mm) Wirkkreisdurchmesser  
 $F_R$  : (kN) zulässige Querkraft nach Drehzahl und Leistungstabellen  
 $F_{R\text{vorth}}$  : (kN) vorhandene Querkraft an der Getriebewelle

Ist der Kraftangriff nicht auf Wellenmitte, so kann die zulässige Querkraft mit Hilfe der Gleichungen 1 und 2 auf jede beliebige Stelle "x" umgerechnet werden.

Burada hesaplamalarda formül 1'in yatak servis ömrüyle formül 2'nin mil dayanımıyla bağlantılı olduğu unutulmamalıdır. Yatak servis ömrüyle alakalı hesaplamalarda formül 1'den gelen sonuç, mil dayanımı ile alakalı hesaplamalarda formül 2'den gelen sonuç kullanılmalıdır.

It should be noted here that in calculations, formula 1 is related to service life and formula 2 is related to shaft stability. The result from formula 1 should be used in calculations related to service life, and the result from formula 2 should be used in calculations related to shaft stability.

Hierbei ist zu beachten, dass grundsätzlich nach Gleichung 1 (Lebensdauer) und Gleichung 2 (Wellenfestigkeit) gerechnet wird, wobei der kleinere Wert als zulässig anzugeben ist.

\* Simgesi güçlendirilmiş W adaptörleri için verilen değerleri gösterir.

\* Sign shows that value which is given on table, for reinforced W adapter.

Das \*-Symbol zeigt die Werte für verstärkte W-Ausführungen an.

| $kg$                | = Redüktörün ağırlığı                                                                  | $kg$               | = Weight of the geared motor                                                                | $kg$               | = Gewicht des Getriebes                                                          |

1) 4 ve 5 kademeli redüktörlerin 0,75 kW'a kadar olan 4 kutuplu motorlarında kayıp yaklaşık 40 W olarak hesaplanmıştır. Kayıp, motor hızına bağlı olarak o oranda değişir.

1) Gear units or gear motors which have 4 and 5 stage reduction 4 pole motor up to 0,75 kW losses are calculated nearly 40 W, losses are dependent motor speed.

1) Bei vier-, fünfstufigen Getrieben gibt es aufgrund der vielen sich drehenden Teile und der relativ kleinen Antriebsleistungen relevanten Leerlaufverluste. Daher wird hier bei 4-poligen Motoren bis 0,75 kW eine Leerlaufverlustleistung von ca. 40 Watt (W) in den Tabellen berücksichtigt.

TR

PD/PM TANITIMI

## PARALEL ŞAFT MONTAJLI REDÜKTÖRLER (PD/PM)

Polat Group Redüktör ürünü olan Paralel şaft montajlı (PD/PM) serisi 26 farklı gövde büyüklüğü ile hizmete sunulmaktadır.

Redüktörler;

- PD/PM A02...52 arası 2 kademeli,
- PD/PM 12...52 arası 2 kademeli redüktörlere indirgeyici gövde montajlanarak 3 kademeli (PD/PM 13...53),
- PD/PM 62...112 ve PD/PM 63...123 arası redüktörler aynı tip gövdede 2 veya 3 kademeli olarak sunulmaktadır
- Yüksek tahvil oranları için 4, 5 ve 6 kademeli redüktörlerimiz de mevcuttur.

Her bir gövde büyüklüğü için çıkış olarak, mil çıkışlı veya delik milli opsiyonlarımız mevcuttur. PD/PM serisi redüktörlerimiz giriş ve çıkış yönü paralel eksenli gövde yapısıyla dar alanlarda uygulama kolaylığı ve ağır çalışma şartlarına uygun tasarımı ile tercih edilmektedir. Delik milli redüktörler uygulanma alanındaki sisteme direk olarak montajlanabilir.

Yeni nesil PGR dişli ünitelerimiz UNICASE ilkesine göre geliştirilmiştir. Redüktörlerimiz bu prensibe göre yekpare olarak tasarlanmıştır. Yekpare gövdemiz tüm rulmanların entegre edildiği tek bir muhafazadır. Yekpare gövdemizin son ölçülerine getirilmesi güncel ve son teknoloji CNC ünitelerimizde gerçekleştirilir. Unicase konsepti en yüksek düzeyde hassasiyet, rijitlik ve dayanıklılık sağlar. Eksenel kuvvetlere ve torqa maruz kalabilen redüktör gövdemizin üzerinde ayrı bağlantı elemanı yoktur. Unicase prensibi şaft eksenlerinin kademeli olmasına izin verir, bu da daha uzun bir çalışma ömrünü garanti etmek için daha büyük yataklama elemanı (rulman) kullanma olanağı sunar. Unicase prensibinin getirdiği hassas mil (şaft) hizalaması ve yüksek yüklem kapasitesi, uzun hizmet ömrü ve düşük gürültü sağlar. Dişliler, yataklar, miller DIN 3990 DIN ISO 281 uluslararası normlara göre hesaplanmıştır. Çıkış tarafı ile giriş arasında eksen kaçıklığına neden olabilecek çıkıntı veya tork yüklerine maruz kalan herhangi bir bağlantı elemanı (vida vb) yoktur. PİK / sfero veya alüminyum gövdeler için gövdeden sağlanan montaj kolaylığı ile vibrasyon salınım etkisi en aza indirilir.

Her bir dişli kademesi için ayrı olarak 0,96...0,98 arasında yüksek bir verimlilikle (her bir kademenin bağımsız olarak verimliliği bu değerler arasındadır) dişli ünitelerimizce sunulmaktadır.

Fabrikamızda bulunan son sistem CNC tezgahlarında açılan dişliler yüksek ve geniş yelpazeli imalat toleransı ile günümüz uluslararası standartlarının tamamını karşılamaktadır. Redüktör gövdelerimiz GG 25-30, GGG 50-60 ya da alüminyum yapılmıştır.

Yataklar ve dişliler tribolojinin kurallarına göre optimize edilmiş bir yağ banyosunda çalışır.

Dişli ünitelerimizin sızdırmazlığında NBR keçe kullanılır. Opsiyonel olarak viton (FKM) keçe kullanımımız da mevcuttur. Dövme malzemeden yapılan dişlilerimiz gerekli ısıtma işlemi, sementasyon, honlama, gibi proseslerden geçirilerek redüktörümüzün sorunsuz çalışması sağlanır. Dişli dizaynındaki doğru oluşturulan geometri ve doğru malzeme seçimi, çalışan dişlilerimizin daha sessiz, daha hafif ve daha yüksek hızlarda daha fazla yük taşıırken daha az ısı üretmesini mümkün kılmaktadır. Redüktörlerimiz sessiz, yüksek dayanımlı ve servis ömrü uzun çalışma sağlamaktadır. Bu da zorlu çalışma koşullarında güvenli çalışmayı beraberinde getirir. PD/PM serisi redüktörlerimiz her türlü endüstriyel uygulamada kullanılabilir.

EN

DESCRIPTION OF PD\PM

## PARALLEL SHAFT MOUNTED GEAR UNITS (PD/PM)

The series of Parallel Shaft Mounted Gear Units of PGR has 26 different case dimensions.

Gear Units;

- Gear units from PD/PM A02 to 52 have 2 stage
- Gear units from PD/PM 12 to 52 can be made 3 stage (From PD/PM 13 to 53) by using reductive case.,
- Gear units from PD/PM 62 to 112 and from PD/PM 63 to 123 are come out as a 2 or 3 stages in the same kind of case.
- We have 4,5 and 6 stage reducers for high ratio numbers.

We have hollow shaft and solid shaft versions for every case dimensions. PD/PM series are suitable for heavy working conditions and ease of usage at narrow place since they has parallel axis case design between input and output. Hollow shaft reducers can be connected to the system of application area easily.

Our new generation PGR gear units have been developed according to the UNICASE principle. Our gear units are designed as a one-piece according to this principle. Our one-piece body is a single housing in which all bearings are integrated. Bringing our one-piece body to its final dimensions is carried out in our updated technology CNC units. The Unicase concept provides the highest level of precision, rigidity and durability. We do not have different connection element on our gear unit body, which can be exposed to axial forces and torque. The Unicase principle allows the shaft axes to have stages, which allows the possibility to use larger bearings (bearings) to guarantee a longer durability. The precise shaft alignment and high loading capacity which is provided by Unicase principle ensure durability and low noise. Gears, bearings, shafts are calculated according to DIN 3990 DIN ISO 281 international norms. There are no connector (screws, etc.) that are exposed to protrusion or torque loads that may cause axial misalignment between the output side and the input side. Vibration oscillation effect is minimized with the ease of mount provided from the body for ductile iron or aluminum bodies.

By our offered gear units with a high efficiency of 0.96...0.98 for each gear stage separately (the efficiency of each stage independently is between these values).

The gears produced on the cutting-edge technology system CNC machines in our factory encounter provides all today's international standards with high and wide range with manufacturing tolerances. Our gear unit bodies are made of GG 25-30, GGG 50-60 or aluminum.

Bearings and gears work in an optimized oil bath according to the rules of tribology.

NBR seal is used in the leakproofing of our gear units. We have viton seal (FKM) as optional. Our gear units, which are made of forged material, are passed through the necessary processes such as heat treatment, cementation, honing. After that, our gear units is ensured working without problem. Correctly created geometry and correct material selection in gear design make it possible for our working gears to be quiet, lighter and they can generate less heat while carrying more loads at higher velocity. Our gear units provide quiet working and durability. This situation brings safe working in hard working conditions. Our PD/PM series gear units can be used in all kinds of industrial applications.

PD/PM-EINFÜHRUNG

## FLACHGETRIEBE (PD/PM)

Die Flachgetriebe (PD/PM) von PGR werden in 26 verschiedenen Gehäusegrößen angeboten.

Getriebe:

- 2-stufig zwischen A02 und A52
- durch Montage von Reduziergehäuse an 2-stufige Getriebe zwischen PD/PM 12 und PD/PM 52, 3-stufig zwischen PD/PM 13 und 53
- Zwischen PD/PM 62 und PD/PM 112 und PD/PM 63 und PD/PM 123 bei gleichen Gehäusen 2- oder 3-stufig lieferbar.
- Für hohe Untersetzungsverhältnisse sind 4-, 5- und 6-stufige Getriebe vorhanden.

Für alle Gehäusegrößen sind Optionen mit Vollwelle oder Hohlwelle vorhanden. Unsere Getriebe der PD/PM-Serie werden bevorzugt mit ihrer parallelen Antriebs- und Abtriebswelle und ihrer dadurch einfachen Anwendung in engen Bereichen und ihrem Design, das für schwere Arbeitsbedingungen geeignet ist. Getriebe mit Hohlwellen können direkt an das System im Anwendungsbereich angeschlossen werden.

Unsere PGR-Getriebe der neuen Generation wurden nach dem UNICASE-Prinzip entwickelt. Unsere Reduzierstücke werden nach diesem Prinzip als Einzelstück konstruiert. Unser solider Körper ist ein einziges Gehäuse, in dem alle Lager integriert sind. In unseren aktuellen und hochmodernen CNC-Anlagen wird unser Massivkörper auf Endmaß gebracht. Das Unicase-Konzept bietet ein Höchstmaß an Präzision, Festigkeit und Widerstandsfähigkeit. An unserem Reduzierkörper befindet sich kein separates Verbindungselement, das axialen Kräften und Drehmomenten ausgesetzt werden kann. Durch das Unicase-Prinzip können die Wellenachsen versetzt werden, was die Möglichkeit bietet, größere Lager zu verwenden, um eine längere Lebensdauer zu gewährleisten. Präzise Wellenausrichtung und hohe Belastbarkeit durch das Unicase-Prinzip sorgen für lange Lebensdauer und geringe Geräuschentwicklung. Zahnräder, Lager, Wellen werden nach den internationalen Normen DIN 3990 DIN ISO 281 berechnet. Es gibt keine Befestigungselemente (Schrauben usw.) zwischen der Abtriebsseite und dem Eingang, die Überstands- oder Drehmomentbelastungen ausgesetzt sind, die eine axiale Fehlausrichtung verursachen könnten. Der Schwingungseffekt wird durch die einfache Montage des Gehäuses für Guss-/Sphäroguss- oder Aluminiumkörper minimiert. Wird von unseren Getrieben mit einem hohen Wirkungsgrad zwischen 0,96...0,98 für jede Getriebestufe separat angeboten. (der Wirkungsgrad jeder Stufe liegt unabhängig zwischen diesen Werten).

Die in unserem Werk auf modernsten System - CNC-Maschinen geöffneten Verzahnungen erfüllen alle heutigen internationalen Standards mit hohen und weiten Fertigungstoleranzen. Unsere Reduzierkörper werden aus GG 25-30, GGG 50-60 oder Aluminium gefertigt.

Lager und Getriebe arbeiten in einem optimierten Ölbad nach den Regeln der Tribologie. Zur Abdichtung unserer Getriebe wird NBR-Filz verwendet. Optional ist auch Viton (FKM)-Filz erhältlich. Unsere Zahnräder aus geschmiedetem Material durchlaufen die notwendigen Prozesse wie Wärmebehandlung, Zementieren, Honen und sorgen für einen reibungslosen Betrieb unseres Getriebes. Eine richtig erstellte Geometrie und die richtige Materialauswahl in der Zahnradkonstruktion machen es möglich, dass unsere Zahnräder leiser, leichter und weniger Wärme erzeugen und gleichzeitig mehr Lasten bei höheren Geschwindigkeiten tragen. Unsere Getriebe zeichnen sich durch leiser Betrieb, hohe Festigkeit und lange Lebensdauer aus. Dies bringt sicheres Arbeiten unter schwierigen Arbeitsbedingungen mit sich. Unsere Getriebe der Baureihe PKD können in allen Arten von Industrieanwendungen eingesetzt werden.

TR

PD/PM TANITIMI

Motorlu ya da motorsuz seçeneklerde, W kovanlı, PAM ve IEC adaptörlü giriş opsiyonlu olarak ürettiğimiz Paralel şaft montajlı redüktörlerde standart olarak sunduğumuz çıkış opsiyonlarımız;

·Delik milli  
·Çıkış milli  
·Konik sıkırtma, delik milli

#### Aksesuarlarımız,

·Lastik Takoz  
·B5 / B14 flanşlı  
·Çektirmeli  
·Konik sıkırtmalı  
·Kilitli  
·Koruma kapaklı  
·Ayak montajlı (sadece PD/PM A02... C13 ile PD/PM 92 ve üst gövde boyutları için) tasarımlarımız mevcuttur.

#### Paralel Şaft Montajlı Redüktörler :

0.12 kW dan 200 kW'ya kadar değişen güçleri ile maksimum 94000 Nm'ye kadar çıkış momenti sağlayabilmektedir.

EN

DESCRIPTION OF PD\PM

For motor and without motor versions, we have input options of free input shaft, with PAM, IEC adaptors. The standart output options for them,

Hollow Shaft  
Solid Shaft  
Shrink disc,hollow shaft

#### Accessories,

Rubber Buffer  
B5/B14 flange  
Fixing element  
Shrink disc  
With backstop  
Protection cover  
Foot mounted designs (only for between PD/PM A02 and PD/PM C13 and upper than PD/PM 92 cases)

#### Parallel Shaft Mounted gear units;

with various power ranging between 0,12 kW and 200 kW, supplies at most 94000 Nm output moment.

DE

PD/PM-EINFÜHRUNG

Bei Auswahlmöglichkeiten mit oder ohne Motor gibt es Antriebsoptionen mit freier Antriebswelle, PAM- und IEC-Adapter. Bei diesen Getrieben sind die Standard-Abtriebsoptionen wie folgt:

·Hohlwelle  
·Abtriebswelle  
·Schrumpfscheibe, Hohlwelle

#### Unzer Zubehör,

·Gummipuffer  
·B5- / B14- Flansch  
·Abziehscheibe  
·Schrumpfscheibe  
·Rücklaufperre  
·Schutzklappe  
·Fußbefestigung verfügbar (nur Gehäusegrößen PD/PM A02... C13 und ab PD/PM 92).

#### Flachgetriebe:

Bieten ein Abtriebsmoment von max. 94000 Nm bei einer Leistung zwischen 0,12 kW und 200 kW.

**MAX. MÜSAADE EDİLEBİLİR ÇIKIŞ MOMENTİ  $M_a$  max.**  
MAX. PERMISSIBLE OUTPUT TORQUES  $M_a$  max.  
MAX. ZULÄSSIGE AUSGANGSMOMENTE  $M_a$  max.

245 - 267

**İki ve Üç kademeli paralel şaftlı redüktör**  
Parallel shaft gear units, double and triple stage reduction  
Zwei und dreistufiges, Flachgetriebemotoren

TR

## W, IEC VE PAM ADAPTÖRÜ

W kovanlı (serbest giriş millî) redüktörler için geçerli maksimum tahrik gücü, uygun tahvil oranı ve çıkış devrine göre (min-1) W, IEC, PAM seçim tablolarında belirlenmiştir. IEC'li ve PAM'lı redüktörlerde her bir gövde büyüklüğü için DIN EN 50347 standardına göre standart güçler verilir. Ancak maksimum çıkış gücü, tahvil oranlarına göre tablolarda verilmiştir. Eğer W, IEC, PAM seçim tablolarındaki listelenen P1 güç değerlerinden daha fazla bir güç istenirse özel hesaplamalar gerekmektedir. Bu durumda lütfen firmamıza danışınız.

W kovanlı redüktörlerin giriş mili yatakları (rulmanları) düzenli olarak yağlanmalıdır. PA/PF 62-63, PD/PM 62-63, PKD 6390 ve üst gövdeler için her 4000 çalışma saatine göre yaklaşık 20-25 gr gres ile otomatik yağlayıcılar ya da gresölük kullanılarak giriş şaftı yatakları düzenli olarak yağlanmalıdır. Yağlayıcı olarak Petamo GHY 133N önerilir. W kovanlı redüktörlerde yağlamanın yanı sıra redüktörün soğutulmasını iyileştirmek için harici bir fan talep üzerine yapılabilir. Lütfen böyle bir istek için tarafımıza danışınız.

Otomatik yağlayıcı ünitesini IEC adaptör girişli redüktörlerimiz için PA/PF 62-63, PD/PM 62-63, PKD 6390 ve üstü gövde büyüklüklerine bağlanabilmektedir. Otomatik yağlama ünitesi giriş mili üzerindeki rulmanlara kalıcı bir yağlama sağlamaktadır. Redüktör devreye alınmadan önce otomatik yağlayıcı aktive edilmeli ve her 12 ay periyodunda değiştirilmelidir. Bu süre ortalama günlük çalışma süresinin ≤ 8 saat olduğu durumlarda geçerlidir. Günlük çalışma süresi 8 saatin üzerindeki tüm durumlarda otomatik yağlayıcı 6 ayda bir değiştirilmelidir.

Otomatik yağlayıcı içindeki gres 0°C...40° arasındaki ortam sıcaklığında çalışmaya göre tasarlanmıştır. Eğer ortam sıcaklığı belirtilen standart değerlerden (0°C...40°) çok uzun süre farklı kalıyorsa özel yağlayıcılar kullanılmalıdır. Bunun gibi durumlar için firmamıza danışınız.

Otomatik yağlayıcı, motor gövde büyüklüğü 160 ve üzeri IEC adaptörlü redüktörlerde, motorun dikey olarak durduğu montaj pozisyonları tarafımızca önerilmez. Bu tarz durumlarda doğrudan motor montajı tavsiye edilir. Eğer redüktör, motor gövde büyüklüğü 160 ve üzeri IEC adaptörlü ve dikey montaj pozisyonu (M4) kullanılması gerekiyorsa, gerçek çalışma koşulları ile tarafımızca kontrol edilmeli ve onaylanmalıdır.

Montaj pozisyonu M2 olduğu dikey çalışma koşullarında, redüktör üzerindeki bazı sızdırmazlık elemanlarının ömrü azalabilir. Bu gibi durumlarda bakım aralıklarının daha kısa olması öneriyoruz. PA/PF 52, PD/PM 52 PKD 5390'a kadar olan gövde büyüklüğündeki IEC adaptörlü redüktörlerimiz, çalışma ömürleri boyunca özel sızdırmazlığa sahip yağlanmış rulmanlar içerir. Bu rulmanların yağlanması için herhangi bir ilave yağlama ünitesine gerek duyulmaz. Bu gövdeler için önerilen bakım süreleri kullanım kılavuzunda belirtilmiştir.

Motor gövde büyüklüğü 63'den 180'e kadar olan IEC adaptörlerin kaplinleri arızaya karşı emniyetli değildir. Ancak motor gövde büyüklüğü 160 ve 180 olan IEC adaptörlerinin kaplinleri otomatik yağlayıcı kullanılıyor ise arızalara karşı emniyetlidir. Motor gövde büyüklüğü 200 olan IEC adaptörlerin kaplinleri arızalara karşı emniyetli değildir. Kaldırıcılar, asansörler ve yaralanmalar vs. gibi kazalara sebep olabilecek özel durumlar için özel önlemler ve özel hesaplamalar gerekebilir. Bu durumlar için PGR'ye danışınız.

Doğrudan monte edilen akuple motorla karşılaştırıldığında IEC adaptöründe ek bir şaft kaplini ve ek rulman yatakları bulunur. Doğrudan monte edilen akuple motorla karşılaştırıldığında IEC bağlantılı redüktörlerde yük kayıpları seviyesi çok daha yüksektir. Sadece teknik avantajlar değil ayrıca fiyat avantajı da sunduğu için PGR olarak akuple motor montajı önerilmektedir.

EN

## W, IEC AND PAM ADAPTER

For gear units with W cylinder (with free input shaft), the maximum drive power, proper ratio rate, and output speed (min-1) is given at W, IEC, PAM selection tables. In gear units with IEC and PAM, standard powers are given for each body size according to DIN EN 50347 standard. However, the maximum output power is given in the tables according to the reduction ratio. Special calculations are required if more power is required than the P1 power values which is listed in the W, IEC, PAM selection tables. In this case, please kindly consult our company.

Input shaft bearings of gear units with W cylinder (free input shaft) must be lubricated regularly. Input shaft bearings of PA/PF 62-63, PD/PM 62-63, PKD 6390 and upper cases should be lubricated regularly with 20-25 gr grease using automatic lubricators or a grease fitting for approximately per 4000 operation hours. Petamo GHY 133N is recommended as a lubricant. For gear units with W (free input shaft), an external fan is available on request to improve the cooling of the gear unit. Please consult us for such a request.

The automatic lubricator unit can be connected to with IEC adapter input cases of PA/PF 62-63, PD/PM 62-63, PKD 6390 and upper cases. The automatic lubrication unit provides permanent lubrication to the bearings on the input shaft. Before the gear unit is used, the automatic lubricator must be activated and changed every 12 months. This period is valid when the average daily working time is ≤ 8 hours. In all cases with a daily operating time of more than 8 hours, the automatic lubricator have to be replaced every 6 months.

The grease which is in the automatic lubricator is designed for operation at ambient temperatures between 0°C...40°. If the ambient temperature differs from the specified standard values (0°C...40°) for too long time, special lubricants have to be used. For such cases, consult our company.

We do not recommend vertical mounting positions for gear units with automatic lubricator, motor body size 160 and above with IEC adapter. In such cases, direct motor mounting is recommended.

If motor body size 160 and above, with IEC adapter and vertical mounting position (M4) must be used, it have to be checked and approved by our company with the actual operating conditions.

In vertical operating conditions where the mounting position is M2, the life of some leakproofing elements on the gear unit may be reduced. In such cases, we recommend shorter maintenance time. Our cases up to PA/PF 52, PD/PM 52 and PKD 5390 with IEC adapter contain bearings which is lubricated and these bearings have special leakproofing for their working life. Additional lubrication unit is not required for the lubrication of these bearings. Recommended maintenance times for these bodies are specified in the user manual.

Couplings of IEC adapters from motor frame sizes 63 to 180 are not fail-safe, they are not safe for faults. However, couplings of IEC adapters with motor body sizes 160 and 180 are fail-safe if automatic lubricator is used. Couplings of IEC adapters with motor body size 200 are not fail-safe. For situations which can lead to accidents like lifters, lifts and injuries etc, you should make special calculations and precautions. For such cases, consult our company. Compared to a directly mounted coupled motor, the IEC adapter has an additional shaft coupling and additional bearings. Compared to a directly mounted coupled motor, the level of load losses is much higher in gear units with IEC connection. Coupled engine installation is recommended as PGR, as it offers not only technical advantages but also price advantage.

DE

## W, IEC UND PAM ADAPTER

Bei Getrieben mit freier Antriebswelle, Typ W, gilt die in den Leistungs- und Übersetzungstabellen angegebene maximale Antriebsleistung. Bei Getrieben mit IEC-Anbau, gilt die Normleistung der jeweiligen Baugröße nach DIN EN 50347, maximale jedoch die in den Leistungs- und Übersetzungstabellen angegebene Antriebsleistung. Bei höheren Drehzahlen, als in den Leistungs- und Übersetzungstabellen angegeben, sind eventuell Sondermaßnahmen erforderlich, wir bitten um Anfrage.

Bei Getrieben mit freier Antriebswelle, Typ W, muss die Antriebswellenlagerung ab Größe PA/PF 62-63, PD/PM 62-63, PKD 6390 regelmäßig nachgeschmiert werden. Wir empfehlen, über den vorgesehenen Schmiermippel, das äußere Wälzlager der Antriebswelle ca. pro 4000 Betriebsstunden mit ca. 20-25 g Fett nachzuschmieren. Empfohlene Fettsorte: Petamo GHY 133N. Auf Wunsch ist auch ein Lüfter auf der Antriebswelle zu besseren Getriebekühlung lieferbar. Wir bitten um Anfrage.

Getriebe mit IEC-Adapter ab Größe PA/PF 62-63, PD/PM 62-63, PKD 6390 können standardmäßig einen automatischen Schmierstoffgeber, der das äußere Wälzlager der Antriebswelle mit Schmierstoff versorgt haben. Der Schmierstoffgeber fördert permanent Schmierstoff zum Lager. Vor Inbetriebnahme des Getriebes ist der automatische Schmierstoffgeber zu aktivieren und dann alle 12 Monate auszutauschen. Dies gilt für eine durchschnittliche Laufzeit ≤ 8 Stunden/Tag. Bei längeren Laufzeiten verkürzt sich der Wechsellintervall auf 6 Monate.

Der Schmierstoffgeber ist ausgelegt für normalen Einsatz bei 0°C bis 40°C Umgebungstemperatur. Weicht die Umgebungstemperatur über längere Zeiträume von dem genannten Richtwert ab, sind Sonderschmierstoffgeber zu verwenden, wir bitten um Anfrage.

Der IEC-Adapter bei Motorgröße ≥ 160 mit dem automatischen Schmierstoffgeber ist unter bestimmten Betriebsbedingungen serienmäßig nicht geeignet für senkrechte Anordnungen, bei denen der Motor senkrecht nach oben steht. Hier ist unbedingt Direktanbau des Motors zu empfehlen!

Der senkrechte IEC-Adapter bei Motorbaugröße ≥ 160 (Einbaulage M4) muss durch PGR unter Bekanntgabe der Betriebsbedingungen geprüft und freigegeben werden. Wir bitten um Beachtung.

Bei senkrechten Anordnungen bei denen der Motor nach unten hängt (Einbaulage M2), kann sich die Lebensdauer der Abdichtung verringern. Hier empfehlen wir kürzere Wartungsintervalle. Die kleineren Getriebe mit IEC-Adapter bis PA/PF 52, PD/PM 52 PKD 5390 Getrieben haben speziell abgedichtete, lebensdauer geschmierte Lager, die keine Wartung benötigen.

Die Kupplung des IEC-Adapters für die Motorbaugrößen 63 bis 180 ist nicht durchschlagsicher. (Ausnahme: Bei den IEC Motorbaugrößen 160 und 180, wenn der automatische Schmierstoffgeber vorhanden ist. Ab IEC 200 sind die verwendeten Kupplungen durchschlagsicher). Bei Hubwerken, Aufzügen und anderen Einsatzfällen mit Personengefährdung sind Sondermaßnahmen erforderlich, hier bitten wir um Anfrage.

Der IEC-Adapter hat gegenüber dem Direktanbau des Motors eine zusätzliche Wellenkupplung und zusätzliche Lagerstellen. Hierdurch entstehen gegenüber dem Direktanbau, des Motors höhere Leerlaufverluste. Wir empfehlen den Direktanbau des Motors, da er nicht nur technische Vorteile, sondern auch zusätzlich noch Preisvorteile bietet.

| TR | UYGULAMA ALANLARI                                                                                                                                                                                                                                               | EN | APPLICATION AREAS                                                                                                                                                                                                                      | DE | EINSATZBEREICHE                                                                                                                                                                                                                                                                 |

## UYGULAMALAR

## APPLICATIONS

## ANWENDUNGEN

KERESTE ENDÜSTRİSİLUMBER INDUSTRYHOLZINDUSTRIE

- \* Kabuk Soyucular
  - Besleme Tamburu
  - Ana Tahrık
- \* Konveyörler
  - Brülör
  - Ana Yük veya Ağır Yük
  - Ana Kütük
  - Hızar ve Taşıma Bandı
  - Kalın Dilim
  - Taşıma
- \* Kesme Testereleeri
  - Zincir
  - Sürükleme
- \* İndirme Boşaltma Tamburları
- \* Uzun Deste
- \* Tomruk Çekme-Eğme
- \* Kütük Döndürme Aygıtları
- \* Sıralama Tablası
- \* Taşıma
  - Zincir
  - Kreynyolu
- \* Tabla Tahrıki

- \* Barkers
  - Spindle Feed
  - Main Drive
- \* Conveyors
  - Burner
  - Main or Heavy Duty
  - Main Log
  - Re-saw, Merry-Go-Round
  - Slab
  - Transfer
- \* Cut-Off Saws
  - Chain
  - Drag
- \* Debarking Drums
- \* Long Deck
- \* Log Hauls - Incline
- \* Log Turning Devices
- \* Sorting Table
- \* Transfers
  - Chain
  - Causeway
- \* Tray Drives

- \* Schalenschäler
  - Zuführtrommel
  - Hauptantrieb
- \* Förderer
  - Brenner
  - Hauptlast oder Schwerlast
  - Baumstumpf
  - Sägwerk und Förderband
  - Platte
  - Transport
- \* Trennsägen
  - Kette
  - Schleppen
- \* Entladetrommeln
- \* Langes Deck
- \* Kloben ziehen und abbiegen
- \* Drehvorrichtungen für Baumstufpe
- \* Sortiertabelle
- \* Transport
  - Kette
  - Kranbahn
- \* Tischlaufwerk

KAĞIT İŞLEMELERİPAPER MILLSPAPIERFÜHRUNG

- \* Karıştırıcı
- \* Saf çözeltiler için Karıştırıcı
- \* Kabuk Soyma Tromelleri
- \* Mekanik Kabuk Soyucu
- \* Dövücü - Öğütücü
- \* Düzleştirme Makinesi
- \* Kalenderleme
- \* Yüzey Pürüzlendirici
- \* Çentik Besleyici
- \* Kaplama Merdanesi
- \* Konveyörler
  - Çentik, Kabuk, Kimyasal
  - Kalın Dilimler İçeren Kütükler
- \* Kesici
- \* Silindir Kalıpları
- \* Kurutucu
  - Kağıt Makinesi
  - Konveyör Tıp
- \* Kabartmalı Basıcı
- \* Ekstrüder
- \* Kağıt Merdaneleri
- \* Presler
- \* Küspe Makinesi
- \* Pompalar

- \* Agitator (Mixer)
- \* Agitator for Pure Liquors
- \* Barking Drums
- \* Mechanical Barkers
- \* Beater
- \* Breaker Stack
- \* Calender
- \* Chipper
- \* Chip Feeder
- \* Coating Rolls
- \* Conveyors
  - Chip, Bark, Chemical
  - Log (including Slab)
- \* Cutter
- \* Cylinder Molds
- \* Dryer
  - Paper Machine
  - Conveyor Type
- \* Embosser
- \* Extruder
- \* Paper Rolls
- \* Presses
- \* Pulper
- \* Pumps

- \* Rührgerät
- \* Mischer für reine Lösungen
- \* Peeling Tromels
- \* Mechanischer Schäler
- \* Schlag - Mahlwerk
- \* Richtmaschine
- \* Kalandrieren
- \* Oberflächenaufrauung
- \* Kerbzuführung
- \* Beschichtungswalze
- \* Förderer
  - Kerbe, Schale, Chemisch
  - Stämme mit dicken Scheiben
- \* Schneider
- \* Zylinderformen
- \* Trockner
  - Papiermaschine
  - Förderertyp
- \* Geprägter Presser
- \* Extruder
- \* Papierrollen
- \* Pressen
- \* Teigmacher
- \* Pumpen

FİLTRELERSCREENSFILTER

- \* Havalı Yıkama
- \* Döner - Taş veya Çakıl
- \* Hareketli Su Girişi

- \* Air Washing
- \* Rotary - Stone or Gravel
- \* Traveling Water Intake

- \* Luftwäsche
- \* Rotierer - Stein oder Kies
- \* Beweglicher Wassereinlass

UNSERE PRODUKTE

1) PD 32... - 80M/4A

**Delik milli, İki kademeli, Paralel şaftlı, Motorlu redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, With motor  
Hohlwelle, Zweistufig, Stirnradgetriebe, Mit Motor

PD 32... - W

**Delik milli, İki kademeli, Paralel şaftlı, W kovanlı redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, With W adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Mit W-adapter

PD 32... - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, IEC adaptörlü redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, With IEC adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Mit IEC-Adapter

PD 32... - PAM 90

**Delik milli, İki kademeli, Paralel şaftlı, PAM adaptörlü redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, With PAM adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Mit PAM adapter

2) PD 32... **LT** - 80M/4A

**Delik milli, İki kademeli, Paralel şaftlı, Lastik takozlu, Motorlu redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, rubber buffer, With Motor  
Hohlwelle, Zweistufig, Stirnradgetriebe, Gummipuffer, Mit Motor

PD 32... **LT** - W

**Delik milli, İki kademeli, Paralel şaftlı, Lastik takozlu, W kovanlı redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, rubber buffer, With W adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Gummipuffer, Mit W-adapter

PD 32... **LT** - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, Lastik takozlu, IEC adaptörlü redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, rubber buffer, With IEC adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Gummipuffer, Mit IEC-Adapter

PD 32... **LT** - PAM 90

**Delik milli, İki kademeli, Paralel şaftlı, Lastik takozlu, PAM adaptörlü redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, rubber buffer, With PAM adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Gummipuffer, Mit PAM adapter

## 3) PD 32... Ç - 80M/4A

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, Motorlu redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, fixing element, With motor  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, Mit Motor

## PD 32... Ç - W

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, W kovanlı redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, fixing element, With W adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, Mit W-adapter

## PD 32... Ç - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, IEC adaptörlü redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, fixing elements, With IEC adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, Mit IEC-Adapter

## PD 32... Ç - PAM 90

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, PAM adaptörlü redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, fixing elements, With PAM adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, Mit PAM-Adapter

## 4) PD 32... Ç / LT - 80M/4A

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, Lastik takozlu, Motorlu redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, With fixing element, rubber buffer, With motor  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, Gummipuffer, Mit Motor

## PD 32... Ç / LT - W

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, Lastik takozlu, W kovanlı redüktör.**  
Hollow shaft, Double reduction, Parallel shaft gear unit, With fixing element, rubber buffer, With W adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, Gummipuffer, Mit W-adapter

## PD 32... Ç / LT - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, Lastik takozlu, IEC adaptörlü redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, With fixing element, rubber buffer, With IEC adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, Gummipuffer, Mit IEC adapter

## PD 32... Ç / LT - PAM 90

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, Lastik takozlu, IEC adaptörlü redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, With fixing element, rubber buffer, With PAM adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, Gummipuffer, Mit PAM adapter

5) PD 32... **KS** - 80M/4A

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırtırmalı, Motorlu redüktör**

Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, With motor  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, Mit Motor

PD 32... **KS** - W

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırtırmalı, W kovanlı redüktör**

Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, With W adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, Mit W-adapter

PD 32... **KS** - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırtırmalı, IEC adaptörlü redüktör**

Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, With IEC adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, Mit IEC-Adapter

PD 32... **KS** - PAM 90

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırtırmalı, PAM adaptörlü redüktör**

Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, With PAM adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, Mit PAM-Adapter

6) PD 32... **KS / LT** - 80M/4A

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırtırmalı, Lastik takozlu, Motorlu redüktör**

Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, rubber buffer, With motor  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, Gummipuffer, Mit Motor

PD 32... **KS / LT** - W

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırtırmalı, Lastik takozlu, W kovanlı redüktör**

Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, rubber buffer, With W adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, Gummipuffer, Mit W-adapter

PD 32... **KS / LT** - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırtırmalı, Lastik takozlu, IEC adaptörlü redüktör**

Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, rubber buffer, With IEC adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, Gummipuffer, Mit IEC-Adapter

PD 32... **KS / LT** - PAM 90

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırtırmalı, Lastik takozlu, PAM adaptörlü redüktör**

Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, rubber buffer, With PAM adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, Gummipuffer, Mit PAM-Adapter

Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, B14-Flansch, Mit IEC-Adapter

PD 32... **KS / B14** - PAM 90

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırtmalı, B14 Flanşlı, PAM adaptörlü redüktör**

Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, B14 flange, With PAM adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, B14-Flansch, Mit PAM-Adapter

10) PD 32... **B5** - 80M/4A

**Delik milli, İki kademeli, Paralel şaftlı, B5 Flanşlı, Motorlu redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, B5 flange, With motor  
Hohlwelle, Zweistufig, Stirnradgetriebe, B5-Flansch, Mit Motor

PD 32... **B5** - W

**Delik milli, İki kademeli, Paralel şaftlı, B5 Flanşlı, W kovanlı redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, B5 flange, With W adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, B5-Flansch, Mit W-adapter

PD 32... **B5** - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, B5 Flanşlı, IEC adaptörlü redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, B5 flange, With IEC adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, B5-Flansch, Mit IEC-Adapter

PD 32... **B5** - PAM 90

**Delik milli, İki kademeli, Paralel şaftlı, B5 Flanşlı, PAM adaptörlü redüktör**

Hollow shaft, Double reduction, Parallel shaft gear unit, B5 flange, With PAM adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, B5-Flansch, Mit PAM-Adapter

## 11) PD 32... Ç / B5 - 80M/4A

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, B5 Flanşlı, Motorlu redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, fixing element, B5 flange, With motor  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, B5-Flansch, Mit Motor

## PD 32... Ç / B5 - W

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, B5 Flanşlı, W kovanlı redüktör.**  
Hollow shaft, Double reduction, parallel shaft gear unit, With fixing element, B5 flange, With W adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, B5-Flansch, Mit W-adapter

## PD 32... Ç / B5 - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, B5 Flanşlı, IEC adaptörlü redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, With fixing element, B5 flange and IEC adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, B5-Flansch, Mit IEC-Adapter

## PD 32... Ç / B5 - PAM 90

**Delik milli, İki kademeli, Paralel şaftlı, Çektirmeli, B5 Flanşlı, PAM adaptörlü redüktör**  
Hollow shaft, Double reduction, Parallel shaft gear unit, With fixing element, B5 flange and PAM adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Befestigungsbausatz, B5-Flansch, Mit PAM-Adapter

## 12) PD 32... KS / B5 - 80M/4A

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırmalı, B5 Flanşlı, Motorlu redüktör**  
Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, With B5 flange and motor  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, B5-Flansch, Mit Motor

## PD 32... KS / B5 - W

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırmalı, B5 Flanşlı, W kovanlı redüktör**  
Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, B5 flange, With W adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, B5-Flansch, Mit W-adapter

## PD 32... KS / B5 - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırmalı, B5 Flanşlı, IEC adaptörlü redüktör**  
Hollow shaft with shrink disc connector, Double reduction, Parallel shaft gear unit, With B5 flange and IEC adapter  
Hohlwelle, Zweistufig, Stirnradgetriebe, Schrumpfscheibe, B5-Flansch, Mit IEC-Adapter

## PD 32... KS / B5 - IEC 90

**Delik milli, İki kademeli, Paralel şaftlı, Konik sıkırmalı, B5 Flanşlı, IEC adaptörlü redüktör**

Tip: PD (Delik Milli Redüktör / Hollow Shaft Gear Unit / Hohlwelle )  
PM (Mil Çıkışlı Redüktör / Solid Shaft Gear Unit / Vollwelle )

Not: Redüktör tiplerinden PD/PM A02, PD/PM B02 dişli üniteleri 2 kademeli, PD/PM C13 dişli ünitesi 3 kademeli olup A0, B0 ve C1 gövde büyüklüğünü göstermektedir.

Not: Gear units which are PD/PM A02, PD/PM B02 and PD/PM C13 are, 2 and 3 stage reduction respectively, but A0, B0 and C1 codes in this gear unit type determine case width.

Hinweis: Getriebe PD/PM A02, PD/PM B02 sind 2-stufige Getriebe, PD/PM C13 Getriebe sind 3-stufig und die Baugrößen A0, B0 und C1 werden angezeigt.

LUBRICATION

DE

SCHMIERUNG

Redüktör içerisindeki yağın basıncının artması yağ sızıntılarına neden olabilmektedir. Bunu önlemek için çalıştırılmadan ya da uzun süreli depolama yapılmadan önce havalandırma tapasının kapağı sökülmelidir.

Montaj aşamasında redüktörlerimiz en uygun mineral yağ ile yağlama prosesini en iyi yapacak şekilde doldurur ve sevkiyatta bu şekilde gönderilir. Yapılan bu ilk doldurma, aşağıdaki tablodan uygun ortam sıcaklığına karşılık gelen (normal tasarım) uygun yağlayıcı ile yapılır. Bunlar dışındaki ortam sıcaklıkları için uygun yağlayıcılar ek bir ücret karşılığında tarafımızca temin edilebilir.

Redüktöre doldurulan yağlayıcı (mineral yağ) her 10000 saat çalışma süresi ya da 2 yıl içinde değiştirilmelidir. Eğer sentetik yağlayıcı kullanılır ise bu süreler 2 katına çıkarılabilir. Yani her 20000 saat veya 4 yılda bir değişim sağlanabilir. Çalışma süresi saat cinsinden belirtilen süreye gelmiş ise yağ değişimi için çalışma yılının dolması beklenmez. Yağ değişiminin daha sık aralıklarla yapılması tavsiye edilir. Bu gibi durumlarda yağ değişiminin yanı sıra kapsamlı bir temizlik de yapılmalıdır.

Yağ değişimi sonrasında özellikle ilk dolulmadan sonra ilk birkaç saatlik çalışma esnasında yağ seviyesinde azalmalar gözlemlenebilir. Bu azalma tolerans dahilinde de öngörülen bir azalmadır.

Müşterinin açık talebi üzerine ek bir ücret karşılığında yağ seviyesi gösterge tapası takabilmekteyiz. Yağ seviyesi gösterge tapası kullanarak müşterinin yağ seviyesini gözlemlemesi ve yaklaşık olarak seviye düzeltilmesini yapmasını tavsiye ederiz. İki saatlik bir operasyonel çalışmanın ardından redüktör stabil bir hale gelir ve soğur. Bu süre zarfında yağ seviyesi gösterge tapasından gerekli kontrol yapılır ve gerekli yağ seviye düzeltilmesi yapılabilir.

Redüktör normal olarak mineral yağ ile dolu olarak gelmektedir. Extra ücretlendirme ile sentetik yağ talep edilebilir.

# -30°C nin altında ve 60°C nin üzerindeki ortam sıcaklıkları için shaft üzerinde kullanılan tüm sızdırmazlık elemanları özel kalite malzeme olmalıdır.

If the pressure of oil within reducer increases, there may be leakage. To prevent this, before working or storage for a long time, the cover of ventilation plug should be removed.

At montage step, reducers are filling with more suitable mineral oil and this oil makes lubrication process the best. Products are sent to shipment in this way. This initial filling is done with suitable lubricant corresponding to the appropriate ambient temperature (normal design) from the table below. Lubricants which are suitable for temperatures other than these ambient temperatures can be supplied by us with an additional cost.

The lubricant (mineral oil) which is filled to the reducer should be changed every 10000 hours of operation or at most two years period. If synthetic oil is used, these times could be twice. That is, it can be replaced every 20000 hours of operation or 4 years period. If the working time has reached the specified time in hours, it is not necessary to wait finish working year. It is advised that you should change lubricant more frequently. In this case, addition to lubrication change, you should clean it comprehensively. After changing lubrication, especially for first time, you can see decrease at lubrication level. This decrease is in our tolerance.

If our customer has request from us for oil level plug, we can deliver it with additional costs. We advice to customer that they should check oil level by oil level plug, and correct oil level. After operational working 2 hours, the reducer will be stable and cool. In this time period, you can check oil level from the window of oil level plug and correct oil level.

Normally, reducer will come with mineral oil but, with extra price, you can obtain synthetic oil.

# Different materials should be used for sealings at operation temperature where temperature is below -30 °C and above 60 °C

Vor Inbetriebnahme und längerem Lagern ist der Verschleiß der Entlüftungsschraube zu entfernen, um einen Überdruck im Getriebe und eine damit verbundene mögliche Undichtigkeit zu vermeiden.

Getriebe sind bei der Auslieferung, betriebsfertig mit geeignetem Mineralöl befüllt. Die Erstbefüllung erfolgt mit geeignetem Schmierstoff entsprechend der geeigneten Umgebungstemperatur (Normalausführung) aus der folgenden Tabelle. Für andere Umgebungstemperaturen sind die entsprechenden Schmierstoffe gegen Mehrpreis erhältlich. Bei Befüllung mit Mineralöl sollte ein Schmierstoffwechsel alle 10.000 Betriebsstunden oder nach zwei Jahren durchgeführt werden. Bei synthetischem Öl verdoppeln sich diese Laufzeiten. Ein Wechsel kann somit alle 20.000 Stunden oder 4 Jahre durchgeführt werden. Wenn die Betriebszeit die angegebene Zeit in Stunden erreicht hat, ist das Betriebsjahr für den Ölwechsel nicht abzuwarten. Kürzere Intervalle für den Ölwechsel werden empfohlen. Es ist empfehlenswert, den Schmierstoffwechsel mit gründlicher Reinigung des Getriebes zu verbinden. Nach einem Schmierstoffwechsel und insbesondere nach der Erstfüllung kann sich der Ölstand in den ersten Betriebsstunden geringfügig ändern, da sich Ölkanäle und Hohlräume erst im Betrieb langsam füllen. Der Ölstand liegt dann immer noch in der zulässigen Toleranz.

Falls auf ausdrücklichen Kundenwunsch gegen Mehrpreis ein Ölschauglas eingebaut wird, empfehlen wir kundenseitig den Ölstand zu beobachten und diesen ungefähr zu korrigieren. Nach zwei Stunden Betriebszeit stabilisiert sich das Getriebe und kühlt ab. Während dieser Zeit erfolgt die notwendige Kontrolle über das Ölschauglas und die notwendige Ölstandskorrektur kann vorgenommen werden. Die Normalbefüllung der Getriebe ist Mineralöl. Synthetisches Öl ist gegen Mehrpreis lieferbar.

Bei Umgebungstemperaturen unterhalb -30°C und oberhalb 60°C sind alle an der Welle verwendeten Dichtelemente in besonderer Werkstoffqualität einzusetzen.

**Not: Sentetik ve mineral yağlayıcılar birbirine karıştırılmamalıdır.**

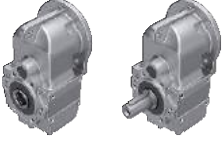

Note: It is important that different kinds of oil (synthetic and mineral oil) should not be mixed.

Bemerkung: Synthetische und mineralische Schmierstoffe dürfen nicht gemischt werden.

TR

KİLİT

Opsiyonel olarak redüktörlerimize kilit sistemi koymaktayız. Kilit sistemimiz yalnızca tek bir dönüş yönüne müsaade vermektedir (saat yönü ya da saatin tersi yönü). Aksi yönde dönüş, kilit sistemi tarafından engellenmektedir.

Üç fazlı motor gövde büyüklüğü 80 ve üzeri AC motorlar ve W (serbest giriş mili) kovanları yağlaması yapılmış kilit sistemi ile donatılabilir.

Kilit sistemi istenildiğinde çıkartılabilir. Kilit sistemi merkezkaç kuvveti tarafından kontrol edilir ve dönüş hızı  $n1 > 900$  dev/dk ise yağlanma ile aşınmasız çalışır.

Dönüş yönünün tanımlanması her zaman çıkış şaftına ya da miline göre olur. Konik sıkırtma kullanılan redüktörlerde konik sıkırtma diski, kullanılan konik sıkırtma şaftının aksi tarafında bulunur. Konik sıkırtmalı redüktörler için dönüş yönü, konik sıkırtmalı şafta göre belirlenir.

**Dikkat:** Sistemi devreye almadan önce motorun ve redüktörün dönüş yönleri kontrol edilmelidir. Redüktör üzerindeki oklar size dönüş yönünü gösterecektir.

**CW** : Saat yönü

**CCW** : Saat yönü tersi

EN

BACKSTOP

Our reducers includes backstop system optionally. Backstop system permits only one direction of rotation (clockwise or counterclockwise). Opposite direction of rotation is prevented by backstop system.

Motors which are three phase and case dimensions upper than 80 and free input shafts can be used with lubricated backstop systems.

You can remove backstop system when you want. Backstop system is controlled by centrifugal force and works without corrosion if the rotation speed upper than  $900 \text{ min}^{-1}$ .

Rotation direction is decided according to output shaft. For reducers with shrink disc, it is at opposite direction of tip of output shaft which includes shrink disc connector.

**Caution:** Before starting, the direction of rotation of the gear unit and motor must be checked to avoid the risk of a breakage.

**CW** : Clockwise

**CCW** : Counterclockwise

DE

RÜCKLAUFSPERRE

Optional bieten wir für unsere Getriebe Rücklaufsperran. Rücklaufsperran ermöglichen den Lauf in nur eine Drehrichtung (im Uhrzeigersinn oder gegen den Uhrzeigersinn). Drehung in die entgegengesetzte Richtung wird durch die Rücklaufsperran verhindert.

Drehstrommotoren ab Baugröße 80, Wechselstrommotoren und W-Adapter (freie Antriebswelle) können mit geschmierten Rücklaufsperran ausgestattet werden.

Die Rücklaufsperran kann auf Wunsch entfernt werden. Die Rücklaufsperran ist fliehkraftgesteuert und läuft bei einer Drehzahl  $n1 > 900 \text{ U/min}$  mit Ölung verschleißfrei.

Die Drehrichtung wird immer mit Blick auf die Abtriebs-Hohlwelle oder -Vollwelle angegeben. Bei Getrieben mit Schrumpfscheibe befindet sich die Schrumpfscheibe gegenüber dem Abtriebswellenende. Die Drehrichtung für Getriebe mit Schrumpfscheibe wird auch nach diesem Abtriebswellenende bestimmt.

**Achtung:** Vor Inbetriebnahme der Anlage die Drehrichtung des Motors und des Getriebes prüfen. Pfeile auf dem Getriebe zeigen die Drehrichtung an.

**CW:** Im Uhrzeigersinn

**CCW:** Gegen den Uhrzeigersinn

SEP tipi servo motor bağlantı adaptörünün bağlantısı kamalı olarak yapılmaktadır. SEK tiplerinde ise servo motor adaptörünün bağlantısı setuskur civata sıkırtması ile yapılmaktadır. Servo motor bağlantı adaptörünün bağlantı flanşının farklı olması durumunda yüksek adetli siparişler üretime alınır.

For connecting SEP adapter which is shown above, servo motor's output shaft is designed with locking key. For connecting SEK type adapter, connecting is supplied with a clamp coupling sleeve. An intermediate flange is required when other servo motor types are used with IEC adapter. Offers are manufactured gladly by PGR.

Der Anschluss des Servomotor-Anschlussadapters Typ SEP erfolgt mit Paßfeder. Bei den SEK-Typen erfolgt der Anschluss des Servomotoradapters durch Anziehen der Anschluss des Servomotoradapters durch Anziehen der Gewindestifte. Bei abweichendem Anschlussflansch des Servomotor-Anschlussadapters werden Aufträge in hoher Stückzahl in Produktion genommen.

Aşağıda verilen değerler güçlendirilmiş konik sıktırma ölçüleridir / The values given below is for reinforced shrink disc / Die unten angegebenen Werte sind Maße für verstärkte Schrumpfscheiben.

|               |               |       |      |      |           |    |     |
|---------------|---------------|-------|------|------|-----------|----|-----|
| PD 72 GKS-KK  | GKS 85 / 108  | 8300  | 3.90 | 3.65 | M16 X 90  | 10 | 250 |
| PD 82 GKS-KK  | GKS 100 / 128 | 13200 | 3.57 | 3.35 | M20 X 100 | 8  | 490 |
| PD 92 GKS-KK  | GKS 130 / 158 | 25400 | 3.89 | 3.71 | M20 X 130 | 12 | 490 |
| PD 112 GKS-KK | GKS 180 / 230 | 69000 | 3.69 | 3.57 | M24 X 150 | 16 | 840 |

Daha iyi ve kolay montaj ve demontaj için konik sıktırma tavsiye edilebilir. Hs ölçüsü, civata sıkılmadan önceki ölçüsüdür. Konik sıktırma genellikle kullanıcının mili kullandığı yönün karşısına montaj edilmelidir. Kullanıcı mil uzunluğu ile shaft uzunluğu (mH) uyusmalıdır. Shaft çapı ISO h6 veya f6'ya göre imal edilmelidir. (f6= Kolay montaj)

S = h6 veya f6 ile konik sıktırmanın güvenilirliği.  
MA = Civatayı sıkmak için gerekli olan tork  
Zs = Vida miktarı  
Mamax = max. izin verilebilir çıkış momenti

Yukarıdaki bütün ölçüler W kovanlı, IEC ve PAM adaptörlü helisel konik dişli redüktörler için de geçerlidir.

PGR recommends to use shrink disc for easier installation and disassembly Hs values show dimension before tightening screw. When customer shaft is installed to the gear unit, shrink disc should be mounted on opposite side of it. Consider that, customer shaft must be equal 'mH' dimension which is length of hollow shaft and customer diameter shaft should be machined according to ISO h6 or f6 tolerances.

S = Assurance of shrink disc (with h6 and f6 tolerance)  
MA = Screw torque for tightening  
Zs = Amount of screw  
Mamax = maximum allowable output moment

All of the above dimensions are also valid for helical bevel gear units with free input shaft, IEC and PAM adaptor.

Zur besseren und einfacheren Montage und Demontage kann eine Schrumpfscheibe empfohlen werden. Hs ist die Größe vor dem Anziehen der Schraube. Die Schrumpfscheibe sollten grundsätzlich entgegen der Antriebsrichtung der Kundenwelle montiert werden. Die Länge der Kundenwelle muss der Hohlwelle (mH) entsprechen. Der Durchmesser der Hohlwelle sollte nach ISO h6 oder f6 gefertigt werden. (f6= einfache Montage)

Zuverlässigkeit der Schrumpfscheibe mit S = h6 oder f6.  
MA= Erforderliches Drehmoment zum Anziehen der Schraube  
Zs = Schraubenanzahl  
Mamax = max. zulässiges Abtriebsdrehmoment

Alle oben genannten Maße gelten auch für Kegelradgetriebe mit freier Antriebswelle, IEC- und PAM-Adapter.

PGR, özellikle karıştırıcılarda kullanılması için shaft üzerindeki rulman mesafelerinin arttırıldığı ve güçlendirilmiş B5 flanşının kullanıldığı redüktörü kullanıma sunmaktadır.

Bu tasarım, daha uzun rulman ömrünün yanı sıra daha yüksek radyal ve aksel kuvvetlere karşı dayanım sağlar. Buradaki oynak makaralı rulman kullanımı özellikle (uzun karıştırıcı millerinde ya da shaftlarında) oluşan eksen kaçıklıklarının karşılanması için idealdir.

PGR makes available reducers with longer dimension bearings which is over the shaft for usage of agitators.

This design enables, besides more durable bearings, more durability for higher radial and axial forces. The usage of spherical roller bearing absorbs the misalignments especially for long shaft agitators.

Insbesondere für Rührwerke hat PGR den Lagerabstand der Welle durch die Verwendung des verstärkten B5-Flansches vergrößert.

Dieses Design ermöglicht die Aufnahme hoher radialer und axialer Kräfte bei erhöhter Lagerlebensdauer. Die Pendelrollenlagerung eignet sich besonders für längere Rührwerkswellen, da Fluchtungsfehler ausgeglichen werden.

TR

SU SOĞUTMALI

Helisel konik dişli ve Paralel şaft montajlı redüktörler için opsiyonel olarak entegre edilmiş bir ısı eşanjörü mevcuttur. Redüktörü soğutan soğutma suyu eşanjörün içinden akar. PGR redüktör sıcaklığının ve soğutma suyunun akışının izlenmesini önerir. Bunun sebebi soğutma serpantinini herhangi bir yağ haznesinde bulunmamasıdır. Bu soğutma aynı zamanda patlama potansiyeli olan atmosferlere (ATEX) sahip uygulamalar için de uygundur. Düşük sıcaklıklarda ısı eşanjörü aynı zamanda redüktöre ısı sağlayabilir.

EN

WATER COOLING

The heat exchanger is available for helical bevel gear units and parallel shaft mounted reducers optionally. The coolant which cool reducer flows inside exchanger. PGR advice you to follow flowing of coolant. The reason for this is cooling serpentine is not inside any oil tube. This cooler is also suitable for implementations which has risk of explosion. (ATEX) At low temperature, heat exchanger may provide heat to reducer.

DE

MIT WASSERKÜHLUNG

Bei Flachgetrieben und Kegelradgetrieben ist optional ein integrierter Wärmetauscher möglich. Der Wärmetauscher wird vom Kühlwasser durchströmt, welches das Getriebe kühlt. PGR empfiehlt eine Temperaturüberwachung oder Kühlwasserdurchflußüberwachung. Denn die Kühltülle liegt nicht im Ölraum. Diese Kühlung ist auch für Anwendungen in explosionsgefährdeten Bereichen (ATEX) geeignet. Bei niedrigen Temperaturen kann der Wärmetauscher auch das Getriebe mit Wärme versorgen.

#### Su soğutma ünitesinin kullanılabileceği montaj pozisyonları

**TR** M4 MONTAJ POZİSYONU İÇİN İLAVE YAĞ HACMİ VE YAĞ TANKI

Motorlu ve mil girişli dikey olarak monte edilmiş redüktörlerde 1. Kademenin yağlanması için yağ seviyesi yüksektir. Dikey montaj pozisyonu olan M4 pozisyonunda isteğe bağlı olarak ilave yağ hacim ünitesinin kullanılması, yağın köpürme yaptığı durumlarda extra bir hacim sağlayarak havalandırma tapasından yağ sızmasını önler.

PGR tahvil oranının 20'den küçük olduğu ve PA/PF 42, PD/PM 42, PKD 4390 dan büyük, gövdelerin dikey montajlarında ilave yağ hacim ünitesinin kullanımı kesinlikle önerilir. Aksi kullanım durumunda PGR ürünü garanti kapsamına almamaktadır.

PGR ayrıca tahvil oranının 20'den küçük ve motor dönüş hızının 1800 d/dk'den büyük olduğu küçük gövdeli redüktörler için de ilave yağ hacim ünitesinin kullanımını önemle tavsiye eder.

**EN** ADDITIONAL LUBRICANT VOLUME AND OIL TANK FOR MOUNTING POSITION M4

Reducers which are with motor, solid shaft and vertical mounting position has high oil level for lubricating first stage. The usage of additional lubricant tube at M4 mounting position upon request prevents leakage when oil is foamed by providing extra volume.

PGR strictly recommends usage of additional oil tube when the ratio number is less than 20, larger than PA/PF 42, PD/PM 42, PKD 4390 cases and vertical mounting positions. Otherwise, the reducer is at out of guarantee.

In addition to this, PGR strictly recommends usage of additional oil tube when the ratio number is less than 20, motor rotation speed is bigger than 1800 min<sup>-1</sup> and smaller cases.

**DE** ZUSÄTZLICHES ÖLVOLUMEN FÜR M4 EINBAUPOSITION

Bei Getrieben mit Motor- und Wellenantrieb, die vertikal eingebaut sind, ist zur Schmierung der 1. Stufe der Ölstand höher. Der optionale Einsatz eines zusätzlichen Ölausgleichsbehälters bei der vertikalen Einbaulage M4 verhindert Ölaustritt am Entlüftungsstopfen durch zusätzliches Volumen bei eventueller Ölschaumbildung. PGR empfiehlt daher dringend bei Übersetzungen  $i_{ges} < 20$  und bei Gehäusen ab PA/PF 42, PD/PM 42, PKD 4390 Ölausgleichsbehälter bei der vertikalen Einbaulage einzusetzen. Andernfalls ist das Getriebe von der Garantie ausgenommen.

PGR empfiehlt außerdem dringend die Verwendung eines zusätzlichen Ölausgleichsbehälters für kleinere Getriebe mit einem Übersetzungsverhältnis von weniger als 20 und einer Motordrehzahl von mehr als 1800 U/min.

İLAVE YAĞ HACMİ / ADDITIONAL LUBRICANT VOLUME / ZUSÄTZLICHES ÖLVOLUMEN

| Tip<br>Type<br>Typ  | Boyut<br>Size | Ø D<br>[mm] | H<br>[mm] | [kg] |
|---------------------|---------------|-------------|-----------|------|
| PD/PM 42 - PD/PM 43 | I             | 100         | 180       | 6    |
| PD/PM 52 - PD/PM 53 |               |             |           |      |
| PD/PM 63            |               |             |           |      |
| PD/PM 62            | II            | 150         | 300       | 7    |
| PD/PM 72 - PD/PM 73 |               |             |           |      |
| PD/PM 82 - PD/PM 83 | III           | 180         | 300       | 8    |

PD/PM 42...83

YAĞ TANKI

Yağ tankları ek havalandırma tüpü içerdiği için ilave yağ hacmi ünitesine göre daha büyüktür. Yağ tankındaki yağ seviyesi sürekli olarak kontrol edilmelidir. PGR PD/PM 92...123 arasındaki büyük gövdelerin M4 dikey montaj pozisyonlarında yağ tankının kullanımı önerir. PGR M4 montaj pozisyonunda yağ tankı kullanılmayan uygulamalarda oluşabilecek problemlerden sorumlu değildir.

OIL TANK

If we compare oil tank and additional lubricant volume, oil tank has large volume than additional lubricant volume because there are two tubes which one of them is vent tube and the other one is oil tube. Oil level must be checked all the time. PGR suggests that, oil tanks should be used at M4 vertical mounting positions for large cases of parallel shaft gear units which are from PD/PM 92 to PD/PM 123. PGR is not responsible for any problem that may occur while oil tank is not used at M4 vertical mounting position for large cases of parallel shaft gear unit.

ÖLSTANDBEHÄLTER

Ölstandsbehälter sind aufgrund der zusätzlichen Entlüftungslleitung größer als Ölausgleichsbehälter. Der Ölstand im Ölstandsbehälter ist zu kontrollieren. PGR empfiehlt zwischen PD/PM 92 und 123 in der vertikalen Einbaulage M4 Ölstandsbehälter einzusetzen. Bei Anwendungen, bei denen in der Einbaulage M4 kein Ölstandsbehälter verwendet wird, übernimmt PGR für eventuelle Probleme keine Gewährleistung.

▼ Oil level = Pressure line

▼ Ölstand = Druckleitung

Redüktör içerisindeki yağ bir pompa vasıtası ile çekilir ve bu yağ bir ısı eşanjöründen geçer. Yağ, bir fan tarafından oluşturulan hava akımı ile soğutulur. Yağ ısı eşanjöründen dışarıya taşınır ve redüktöre geri gönderilir. Sıcaklık bir termostat ile kontrol edilir. PGR bu sıcaklığın izlenmesini önerir.

Picture which is above on this page shows cycle of the cooling unit. There is a thermostat on the gear unit for checking oil temperature. Oil flows from suction line to pressure line which is provided by a pump. In this way, oil temperature is cooled down by a fan which is supplying air flow of oil. Then, oil flows to the house of gear unit.

Das Getriebeöl wird von einer Pumpe angesaugt und durchströmt einen Wärmetauscher. Durch einen von einem Ventilator erzeugten Luftstrom erfolgt die Ölkühlung. Aus dem Wärmetauscher wird das Öl wieder in das Gehäuse zurückgefördert. Die Temperaturregelung erfolgt über einen Thermostaten. Eine Temperaturüberwachung wird empfohlen.

Mekanik keçe kullanımı özellikle uzun süreli maruz kalınan kötü çalışma koşullarına uygundur. Sıvı yoğunluğunun çok olduğu daldırılmalı çalışma ortamlarında maximum seviye sızdırmazlık sağlar. Bu keçe tipi birçok olumsuz dış çevre koşullarından (Aşırı tozlu, sulu) yüksek seviyede koruma sağlar.

The use of mechanical seals is especially suitable for long-term poor working conditions. It provides maximum level of leakproofing for working areas which is immersion and high density of liquid. This type of seal provides a high level of protection from many unfavorable external environmental conditions (extreme dust, water).

Der Einsatz von Gleitringdichtungen eignen sich besonders bei langfristiger Belastung durch schlechte Arbeitsbedingungen. Diese bieten maximale Undurchlässigkeit in Arbeitsumgebungen unter Wasser mit hoher Feuchtigkeit. Dieser Dichtungstyp bietet einen hohen Schutz vor vielen schädlichen Umwelteinwirkungen (extremer Staub, Wasser).

TR

**ÇEKTİRME KİTİ**
**Çektirme Kiti**

Değişik gövde büyüklükleri için opsiyonel olarak çektirme kitlemiz şaft çıkışlı dizaynlarımızda mevcuttur.

**Çektirme kiti için kullanım gereksinimleri:**

- Kullanılan müşteri milinin alın tarafının merkezinde DIN 332/2 standartlarına uygun bir delik olmalıdır.
- Müşteri mili, faturalı ya da faturasız olsa da çektirme kiti ile uyumludur.
- I numaralı montaj pozisyonu olması halinde, müşteri mili redüktör şaftının içinde bulunan segman ile tutturulur. (Parça A)
- II numaralı montaj pozisyonu olması halinde, müşteri milinin üzerinde bulunan fatura kullanılarak doğrudan redüktör şaftı üzerine tutturulur. (Parça B)

**DEMONTAJ / DISASSEMBLY**
**Puller Kit**

The puller kit is optionally available on shaft mounted gear units.

**Using conditions:**

- The centre hole must be DIN 332/2 for customer solid shaft.
- The customer shaft can be fixed with the puller kit (with shoulder or without shoulder)
- When the assembly in Fig. I is used, the customer shaft is fasten by the circlip in the gear unit shaft.(Track A)
- When the assembly in Fig. II is used, it is fasten directly to the gearbox shaft using the invoice on the customer shaft.

**L= max. kullanıcı şaft boyu**  
**L= maximum length of the solid shaft**  
**L= max. Kundenwellenlänge**

**MONTAJ / ASSEMBLY**

- 1) Müşteri mili
  - 2) Rondela DIN 127
  - 3) \* İç Segman DIN 472
  - 4) \* Çektirme civatası
  - 5) Alyan başlı civata DIN 912
  - 6) \* Yaylı rondela
  - 7) \* Somun
  - 8) Redüktör şaftı
  - 9) Çektirme rondelası
- \*PGR tarafından temin edilmez.

**DEMONTAJ:**

- 1) Alyan başlı civata sökülmalıdır. (5)
- 2) Çektirme rondelası takılmalıdır. (9)
- 3) Yaylı rondela takılmalıdır. (6)
- 4) Somun yerleştirilmelidir. (7)
- 5) Segman takılmalıdır. (8)
- 6) Çektirme civatası gevşetilerek müşteri mili şafttan ayrılmalıdır. (4)

**MONTAJ:**

- 1) Müşteri mili, redüktör şaftının içine yerleştirilmelidir. (8)
- 2) Çektirme rondelası redüktör şaftının içine yerleştirilmelidir. (9)
- 3) Çektirme rondelası ile alyan başlı civata ve rondela birbirine sabitlenmelidir. (9-5-2)

**Kullanım Koşulları (Montaj için):**

- Müşteri milinin merkezinde DIN 332/2 standartlarına dışı açılmış delik bulunmalıdır.
- Müşteri milinin boyu "L" uzunluğundan büyük olmamalıdır. Aksi halde çektirme elemanlarını kullanmak mümkün olmayacaktır. (3-6-7)

**Kullanım Koşulları (Demontaj için):**

- Demontaj ölçüleri fabrika standartlarından yararlanılarak alınabilir.
- Demontaj işlemi yalnızca boyutu "L" yi aşmayan delik mile geçecek dolu miller için geçerlidir.

- 1) Customer's shaft
  - 2) Washer DIN 127
  - 3) \* Circlip DIN 472
  - 4) \* Puller screw
  - 5) Socket head screw DIN 912
  - 6) \* Thrust washer
  - 7) \* Nut
  - 8) Hollow shaft
  - 9) Puller washer
- \*Star signs are shown this item are not provided by PGR

**DISASSEMBLING:**

- 1) Loosen the socket head screw (5)
- 2) Remove puller washer (9)
- 3) Install spring washer (6)
- 4) Install nut(7)
- 5) Install circlip (3)
- 6) Remove solid shaft from hollow shaft with using puller screw (4)

**ASSEMBLING:**

- 1) The customer shaft must be mounted inside the gear units shaft. (8)
- 2) The puller washer must be mounted inside the gear units shaft. (9)
- 3) The bolt and washer must be fixed with the puller washer. (9-5-2)

**Usage Conditions (Assembling):**

- The user shaft must be threaded to the center according to DIN 332/2.
- The customer shaft must not exceed the "L" length, otherwise the puller cannot be applied. (pos. 3,6,7)

**Usage Conditions (for disassembly):**

- Disassembly dimensions can be taken by using factory standards.
- The disassembly procedure is only valid for solid shafts which will be connected to solid shaft and dimension does not exceed "L".

**Aufziehvorrichtung**

Für verschiedene Gehäusegrößen sind optional Abziehvorrichtungen für Ausführungen mit Hohlwellenabtrieb erhältlich.

**Nutzungsanforderungen für die Abziehvorrichtung:**

- In der Stirnmitte der Kundenwelle sollte eine Bohrung nach DIN 332/2 vorhanden sein.
- Die Kundenwelle ist mit der Abziehvorrichtung kompatibel, mit oder ohne Wellenabsatz.
- Bei Bauform I wird die Kundenwelle mit dem Sicherungsring in der Getriebewelle befestigt. (Teil A)
- Bei Einbaulage II wird die Kundenwelle am Wellenabsatz direkt auf der Getriebewelle befestigt (Teil B)

- 1) Kundenwelle
  - 2) Federring DIN 127
  - 3) \* Sicherungsring DIN 472
  - 4) \* Abziehschraube
  - 5) Innensechskantschraube DIN 912
  - 6) \* Federscheibe
  - 7) \* Schraubenmutter
  - 8) Getriebewelle
  - 9) Abziehscheibe
- \*wird Nicht von PGR bereitgestellt.

**DEMONTAGE:**

- 1) Innensechskantschraube muss entfernt werden. (5)
- 2) Die Abziehscheibe muss entfernt werden. (9)
- 3) Federscheibe muss eingelegt sein. (6)
- 4) Die Schraubenmutter muss eingesetzt werden. (7)
- 5) Der Sicherungsring muss montiert sein. (3)
- 6) Die Kundenwelle sollte durch Lösen der Abziehschraube von der Welle getrennt werden. (4)

**MONTAGE:**

- 1) Die Kundenwelle muss in der Getriebewelle befestigt werden. (8)
- 2) Die Abziehscheibe muss in die Getriebewelle eingelegt werden. (9)
- 3) Die Abziehscheibe und die Sechskantschraube und der Federring müssen miteinander befestigt werden. (9-5-2)

**Nutzungsbedingungen (für Montage):**

- In der Mitte der Kundenwelle muss eine Gewindebohrung nach DIN 332/2 vorhanden sein.
- Die Länge der Kundenwelle darf die Länge „L“ nicht überschreiten. Andernfalls können die Abziehelemente nicht verwendet werden. (3, 6,7)

**Nutzungsbedingungen (für Demontage):**

- Demontagemasse können anhand von Werksnormen übernommen werden.
- Das Demontageverfahren gilt nur für Vollwellen, deren Abmessung „L“ nicht überschreitet.

#### Motor Platform Montajı

Müşteri motor platformunu kullanarak farklı makina ve sistem tasarlarken çok fazla yapıcı olanaklar elde edilebilir.

Motor platform tasarımı PGR monoblok dişli ünitesi serileri için tüm montaj pozisyonlarında kullanılabilir. 5 çeşit motor platformu tüm motor-redüktör montaj kombinasyonlarını kapsar. Çok kademeli redüktör tasarımları için de yine seçim tablolarından motor platformu seçimi yapılabilir.

#### PGR motor platformu kullanımının müşteriye sağladığı avantajlar;

- \* Hafif ve değişken titreşimleri etkileyen yapı
- \* Korozyona dayanıklı sabitleme elemanları
- \* Tüm montaj pozisyonlarında kullanılabilirlik
- \* Optimum kayış gerginliğini yakalamak adına ayarlanabilir yükseklik ayarı
- \* Birçok motor ve gövde büyüklüğü için motor platformu üzerinde bulunduğu bağlantı delikleri
- \* 90° her yöne döndürülebilir yapı
- \* Seçim tablolarından tahvil oranının  $i=1$ 'e eşit olduğu durumlar için önerilir.

#### Assembling of Motor Platform

By using motor platform, you may have a lot of facility for designing different machines and systems.

Motor platform design may be used at all mounting positions for monoblock gear units. 5 types of motor platform covers all motor-reducer mounting combinations. For multi stage gear units, you can also select motor platform from selection tables.

#### The advantages of using motor platform to customer

- \* Structure that affects light and variable vibrations
- \* Fixing elements resistive for corrosion.
- \* Usability at all mounting positions
- \* Adjustable height adjustment to achieve optimum belt tension
- \* Connection holes over motor platform for a lot of motor and motor case dimension
- \* 90° rotation all direction
- \* It is recommended for situations where the ratio is equal to  $i=1$  from the selection tables

#### MOTORKONSOLE MONTAGE

Durch den Einsatz der Motorkonsole stehen dem Planer weitere konstruktive Möglichkeiten bei der Auslegung von Maschinen und Anlagen zur Verfügung. Die Motorkonsole ist so ausgelegt, dass sie in Verbindung mit allen PGR-Blokgehäusegetrieben in allen Bauformen kombiniert werden kann. Fünf Baugrößen decken alle Motor-Getriebekombinationen ab. Die jeweils möglichen Zuordnungen entnehmen Sie den Auswahl tabellen, die auch für die entsprechenden mehrstufigen Getriebeausführung Gültigkeit haben.

#### - Vorteile der PGR-Motorkonsole für den Anwender;

- \* Leichte und variable Vibrationen dämpfende Konstruktion
- \* Korrosionssichere Befestigungselemente
- \* In allen Einbaupositionen einsetzbar
- \* Leicht zu handhabende Höhenverstellung für optimale Riemenspannung
- \* Motorkonsole mit Bohrungen für mehrere Motorbaugrößen
- \* In alle Richtungen um 90° schwenkbar
- \* Empfohlen für Situationen, in denen gemäß Auswahltable Übersetzungen  $i=1,0$  sind

**Motor platformu seçim örneği:**

Öncelikle gerekli çıkış hız veya gerekli çıkış gücü ihtiyacına bağlı olarak kullanacağımız temel redüktör tipini belirlemeliyiz. Motorlu seçim tablolarında motor çıkış gücü ve tahvil oranına göre redüktör seçimi yapınız.

0.25 kW, 13.3 d/dk,  $i = 109.45 \rightarrow$  PD 12 - 71 M

Redüktör tipinin seçilmesinin ardından motor gövde büyüklüğü ve redüktör tipine bağlı tabloyu kullanarak motor platformu tipini (MK) tespit ediniz (Sayfa 74).

71 M  $\rightarrow$  PD 12  $\rightarrow$  MK1

MK1 tipi platforma göre motor gövde büyüklüğü satırını göz önüne alarak kayış tipi, ayar aralığı, kayış uzunluğu, 2 mil arası eksen mesafesi ve kayış sayısı bilgileri elde edilebilir. (Sayfa 74)

**Example of motor platform selection:**

First of all, we must determine the basic gearbox type we will use depending on the required output speed or the required output power requirement. In the motor selection tables, select the reducer according to the motor output power and bond ratio.

0.25 kW, 13.3 min<sup>-1</sup>,  $i = 109.45 \rightarrow$  PD 12 - 71 M

After selecting the gearbox type, determine the motor platform type (MK) using the table depending on the motor body size and gearbox type (Page 74).

71 M  $\rightarrow$  PD 12  $\rightarrow$  MK1

Belt type, adjustment range, belt length, axis distance between 2 shafts and number of belts can be obtained by considering the motor body size line according to the MK1 type platform. (Page 74)

**Beispiel für die Auswahl der Motorkonsole:**

Zunächst ist je nach geforderter Abtriebsdrehzahl bzw. geforderter Abtriebsleistung der zu verwendende Getriebetyp zu bestimmen. Wählen Sie in den Auswahltabellen für Motoren das Getriebe entsprechend der Abtriebsleistung und dem Übersetzungsverhältnis.

0.25 kW, 13.3 min<sup>-1</sup>,  $i = 109.45 \rightarrow$  PD 12 - 71 M

Nach Auswahl des Getriebetyps ermitteln Sie den Motorkonsolentyp (MK) anhand der Tabelle in Abhängigkeit von Motorbaugröße und Getriebetyp (Seite 74).

71 M  $\rightarrow$  PD 12  $\rightarrow$  MK1

Informationen zu Riementyp, Verstellbereich, Riemenlänge, Achsabstand zwischen 2 Wellen und Anzahl der Riemen können unter Berücksichtigung der Zeile für die Motorgröße gemäß dem MK1- Motorkonsolentyp ermittelt werden. (Seite 74)
